EMPLOYMENT OUTCOMES

Career Development Services, in collaboration with the Office of Institutional Effectiveness, annually conducts a First-Destination Survey for our entire graduating class. For the Class of 2019, data collection began as early as October 2018. To increase our knowledge rate, multiple data sources and tactics were employed beyond the traditional direct email surveying methods. In total, we collected information on the post-graduation plans from 1,273 of our BS/BA graduates; for a knowledge rate of 78.2%. Similarly, among our Masters’ and PhD recipients, we collected information from 920 of our graduates; for an 80.5% knowledge rate.

Employment outcomes for this year’s graduates continued to increase from previous years with 77.4% of our baccalaureate degree recipients reporting full-time employment within the first six months of graduation. Among the BS/BA graduates, 5.3% elected to pursue full-time graduate school and 8.5% are conducting a post-graduation internship or working part-time. Taken together, these outcomes account for 91.2% of our BS/BA recipients.

Seventy-nine percent of our masters and PhD graduates reported full-time employment within six months of graduation. Among those graduates, 1.6% are continuing their education, 5.7% are conducting post-graduation internships or working part-time; together accounting for 84.6% of our MS, MA, and PhD recipients.
Graduates who reported that they had obtained full time employment were asked to indicate how they found their positions. Over fifty-three percent (53.5%) of undergraduate respondents and nearly fifty percent (49.6%) of the graduate degree respondents to this question reported that they found full time employment through their participation in one or more NJIT Career Development Services administered programs.

2020 Graduate Employment Outcomes will be available January 2021
