Re: **(NJIT NEWARK CAMPUS WASTEWATER DISCHARGE SARS-CoV-2 SAMPLING & PCR ANALYSIS) WEEKLY DATA SUMMARY FOR 10/5-10/7/2020** {Omega Project #: 20-1177}

---

Attachment(s):

- *Prestige EnviroMicrobiology Laboratory Analysis Reports for samples collected 10/5-10/7/2020*
- *Sample Trends*

Project Overview:

In order to proactively predict potential escalation of COVID-19 cases in occupied campus dormitory buildings, 24-hour composite wastewater (WW) discharge sampling is being performed, followed by 3<sup>rd</sup> party laboratory analysis in accordance with the published method cited on the attached laboratory analysis report using the approved CDC EUA Kit.

Weekly Data Summary:

WW Discharge Sampling Location	24-hr Sampling Date Range	2019-nCoV (N1 Protein)	Cycle Threshold Value <sup>3</sup> (N1 Protein)	2019-nCoV (N2 Protein)	Cycle Threshold Value <sup>3</sup> (N2 Protein)	Conc. (Copies of RNA/mL)
Oak-07	10/5-10/6/2020	ND	ND	ND	ND	NA
Cypress-06	10/5-10/6/2020	ND	ND	ND	ND	NA
Laurel E-04	10/5-10/6/2020	ND	ND	ND	ND	NA
Laurel M-06	10/5-10/6/2020	ND	ND	ND	ND	NA
Redwood - 05	10/6-10/7/2020	ND	ND	ND	ND	NA
GRK Honors – 07	10/6-10/7/2020	ND	ND	ND	ND	NA

### Local Trending:

According to *covidactnow.org* online database for Essex County:

### **At risk of outbreak**

Essex County is at risk of an outbreak. COVID cases are either increasing at a rate likely to overwhelm hospitals and/or the state's COVID preparedness is below international standards

Infection Rate 10/5-10/7/20: 1.21% (increasing)

Positivity Rate 10/5-10/7/20: Unknown; insufficient data to assess.

Daily New Cases Per 100k: 4.9 to 5.9 (increasing)

### Discussion of CT Score

The cycle threshold (Ct) refers to the number of cycles in an RT-PCR assay needed to amplify viral RNA to reach a detectable level. The Ct value can thus indicate the relative viral RNA level in a specimen (with lower Ct values reflective of higher viral levels).

Since the assessment of covid-19 in sewers is an ongoing developing project the following is intended as a guideline only.

### Omega Recommendations:

CT Value	RNA/L	Occupant Risk	Recommendation
>40	<2,000	None Detected – No Risk identified above normal for the surrounding area.	No Action
39.99 – 37.5	2,001 – 20,000	Low	Voluntary COVID-19 Testing for occupants
37.4 – 32.59	20,001 – 200,000	Moderate	Non-Voluntary COVID-19 testing for 50% of dorm occupants
32.58 - 29.11	200,001 – 1,999,999	High	Non-Voluntary COVID-19 testing for all dorm occupants. Occupant isolation until test results are received.
29.1 – <26.49	2,000,000 - >20,000,000	Very High	Occupant isolation for a minimum of a week. Non-Voluntary COVID-19 testing for all dorm occupants at the start and end of the week

Please note, there is an inverse relationship between CT values and RNA/L.

Based on the results of the testing performed on 10/6 to 10/7/2020, no risk was identified above normal (for the surrounding area) in any of the specific dormitories tested on the dates of testing.

### Summary

No additional action is recommended at this time other than reminding students of use of masks, social distancing, and personal hygiene (frequent hand washing).

1. The samples in this report were received in good, acceptable conditions. Results relate only to the items tested.
2. Wastewater samples are processed following the protocol described in the article: Ahmed, W., et al. 2020. First confirmed detection of SARS-CoV-2 in untreated wastewater in Australia: A proof of concept for the wastewater surveillance of COVID-19 in the community. Science of the Total Environment 728. <https://doi.org/10.1016/j.scitotenv.2020.138764>
3. The primers and probes in 2019-nCoV CDC EUA Kit are designed for the detection of the two SARS-CoV-2 genes that encode for the N1 and N2 proteins. The kit is manufactured and supplied by Integrated DNA Technologies and approved by the U.S. Centers for Disease Control and Prevention (CDC). Three controls, two positive controls for N proteins and one internal control for the RNA extraction process, are simultaneously run with the samples.
4. Cycle Threshold Value refers to the number of cycles required for the fluorescent signal to cross the detectable threshold in Reverse Transcriptase Polymerase Chain Reaction (RT-PCR); a lower cycle threshold value indicates a higher viral load.
5. ND = not detected, no genetic marker is detected within 40 PCR cycles. NA = not applicable. The detection limit is 10 copies/reaction.

6. Report amended to reflect the changes in the sample ID's from Laurel E-03 to Laurel E-04 and from Laurel M-05 to Laurel M-06.
