

Environmental Site Work Adjacent to Mechanical Engineering Center — Environmental Health and Safety

On Tuesday, May 26, environmental remediation consultants will be conducting work related to an environmental monitoring well adjacent to the Mechanical Engineering Center (ME). The project will begin with material delivery on Tuesday, May 26 and then proceed until Friday, May 29. Building access for ME and the Central Avenue Building (CAB) will not be affected. The vendors will set up their equipment (pump trucks, air compressors, and associated items) on the asphalt surface between ME and CAB. [Please see the linked project diagram](#). Due to the reduced faculty, student, and staff activity on campus this project will have little impact campus operations. EHS will be monitoring the vendor's activities throughout the duration of the work.
