Special Announcements

NSF Notice 145: Resumption of Operations at the National Science Foundation

NSF is open for business! We thank you for your forbearance during this challenging time, and for your support of students, postdocs, faculty, technical and administrative support staff and researchers. It has not been easy for our continuing or new grantees, especially emerging scholars and hopeful aspirants. We thank you for giving them a helping hand and ask you to work with us to get everyone back on track as soon as possible. We thank you for continuing to emphasize and highlight the importance of basic research as the foundation for technological progress, and for health, security and prosperity.

After a long and difficult lapse in appropriations, the agency is operating under a three-week continuing resolution. This means we will not be able to conduct "business as usual," and we will have to set priorities for what to do first. We will start with the most pressing of issues, including processing the backlog of awards to universities and small businesses, rescheduling merit review panels that were cancelled, funding facilities and renewing oversight of those facilities, and funding graduate student and postdoctoral fellowships. In addition, we will advance the bold new agenda for science envisioned by NSF and the National Science Board, an agenda now being formulated in new solicitations. Our hardworking staff will be pressed to do more. We once again ask for your forbearance as we deal with this unprecedented situation. And we welcome good ideas for making rapid progress, whether they come through scientific organizations and societies or from individuals.

PROPOSAL PREPARATION & SUBMISSION

- The issuance of new funding opportunities (program descriptions, announcements or solicitations) and Dear Colleague Letters (DCLs) will resume in the coming days.
- The NSF FastLane system, Grants.gov and Research.gov were available for proposal preparation and submission during the lapse.
- The implementation date for the revised NSF *Proposal and Award Policies and Procedures Guide* (PAPPG) ([NSF 19-1](#)), which was scheduled to become effective on January 28, 2019, has

been delayed. NSF will post a new implementation date on the NSF website as soon as practicable. In the interim, the current version of the PAPPG ([NSF 18-1](#)) applies.

Updated 1/31/19 Impact on Existing Due Dates

Guidance to the proposer and awardee community was updated on January 25, 2019, to specify that NSF will be extending the deadline date for the solicitations or Dear Colleague Letters (DCLs) listed in the table below. The table has now been updated to include any additional affected solicitations and DCLs, along with the revised deadlines. **Deadlines for published program descriptions, announcements, solicitations and DCLs that do not appear on the list below remain unchanged.**

Pub ID	Title	Original Deadline	Submission Type	New Deadline Date*
19-500	Joint DMS/NLM Initiative on Generalizable Data Science Methods for Biomedical Research (DMS/NLM)	16-Jan-19	Full proposals	14-Feb-19
19-543	Harnessing the Data Revolution (HDR): Institutes for Data-Intensive Research in Science and Engineering - Ideas Labs (I-DIRSE-IL)	28-Jan-19	Preliminary proposals	4-Mar-19
19-018	Dear Colleague Letter: EARly-concept Grants for Exploratory Research on Artificial Intelligence (AI) and Society - Supported Jointly with the Partnership on AI	28-Jan-19	EARly-Concept Grants for Exploratory Research (EAGERs)	28-Feb-19
19-030	Dear Colleague Letter: Leadership-Class Computing Allocations	1-Feb-19	Supplemental funding requests	14-Feb-19
19-518	Harnessing the Data Revolution (HDR): Data Science Corps (DSC)	4-Feb-19	Full proposals	14-Feb-19
19-526	Materials Innovation Program	4-Feb-19	Full proposals	26-Apr-19
19-524	Training-based Workforce Development for Advanced Cyberinfrastructure (CyberTraining)	6-Feb-19	Full proposals	14-Feb-19
19-530	Ideas Lab: Cross-cutting Initiative in CubeSat Innovations	8-Feb-19	Preliminary proposals	12-Feb-19
19-523	EarthCube Office	11-Feb-19	Full proposals	28-Feb-19
19-511	Navigating the New Arctic (NNA)	14-Feb-19	Full proposals	4-Mar-19
19-509	NSF/CASIS Collaboration on Tissue Engineering and Mechanobiology on the International Space Station (ISS) to Benefit Life on Earth	15-Feb-19	Full proposals	4-Mar-19

Pub ID	Title	Original Deadline	Submission Type	New Deadline Date*
19-531	Frontier Research in Earth Sciences (FRES)	20-Feb-19	Full proposals	21-Feb-19
19-532	Enabling Quantum Leap: Quantum Idea Incubator for Transformational Advances in Quantum Systems (QII - TAQS)	21-Feb-19	Preliminary proposals	22-Feb-19

* NSF will be modifying each solicitation or DCL to reflect the new deadline date.

Proposal Review Process

Decisions about panels that were canceled due to the lapse will be at the discretion of individual divisions/offices. Panelists on canceled or to-be-rescheduled panels will be contacted by the cognizant NSF Program Officer with a status update; please await guidance from the cognizant NSF Program Officer.

Proposal Processing Time

In many cases, the Foundation will not be able to meet our customer-service standard of informing applicants/proposers about funding decisions for their proposals within six months of the deadline or target date, or receipt date, whichever is later. We will, however, work to make decisions as quickly as practicable.

Issuance of New Grants and Cooperative Agreements

Grants or cooperative agreements impacted by the lapse will be awarded as early as practicable.

UPDATED 1/31/2019 The implementation date for the revised set of [NSF Grant Conditions](#), which was scheduled to become effective on January 28, 2019, has been delayed. NSF will post a new implementation date on the NSF website as soon as practicable. In the interim, the current set of grant conditions referenced in the award notice applies.

Issuance of Continuing Grant Increments (CGIs)

Priority will be given to processing of CGIs that could not be processed during the lapse.

POST-AWARD ADMINISTRATION

Performance of Work

During the lapse, awardees were authorized to continue performance under their NSF awards to the extent that funds were available, and the term of the grant or cooperative agreement had not expired. During the lapse, as always, any expenses incurred were required to be necessary for performance of the work and allowable in accordance with 2 CFR § 200, *Uniform administrative requirements, cost principles, and audit requirements for Federal awards*.

Payments

Payments and the ability of awardees to draw down funds under grants and cooperative agreements via the Awardee Cash Management System (ACM\$) were reinstated on January 28, 2019.

Project Reporting

Research.gov was available during the lapse for submission of required Annual, Final and Project Outcomes Reports. All reports submitted during the lapse will be reviewed and acted upon by NSF as early as practicable, with priority being given to awards with a contingent CGI due to be awarded.

No-Cost Extensions and Other Post Award Transactions

NSF electronic systems were available for use by the awardee community to submit no-cost extension, award transfer, supplemental funding request and other post award notifications and requests via NSF electronic systems. All requests submitted during the lapse will be processed by NSF as early as practicable.

Undergraduate Research and Innovation (URI) URI Student Seed Grants: Spring 2019

Phase-1 Student Seed Grants: \$500 per project
URI Phase-2 Student Seed Grants: \$3,000 per project

Track-1 Technology/Product Development and Innovation
Track-2: Application Based Research

Proposal Submission Deadline: February 25, 2019
URI Workshop New Proposal Presentations:
March 12, 2019; 2.00 PM – 5.30 PM; Ballroom A, Campus Center

Information Session on Proposal Writing and Submission
Hosted by URI External Advisory Board Members
February 7, 2019; 12.00 PM to 1.30 PM; Room 240, Campus Center

NJIT 2020 Vision strategic plan emphasizes providing undergraduate students an outstanding education with opportunities to have research and innovation experience as part of their NJIT learning enabling them to succeed and assume leadership roles in our society. The Undergraduate Research and Innovation (URI) program has evolved as a significant part of the education and research experience at NJIT. The URI website <http://centers.njit.edu/uri/> summarizes undergraduate research and innovation opportunities and provides information about resources and competitions.

We are pleased to announce the Undergraduate Research and Innovation Student Grant (URISG) program to provide students Phase-1 Student Seed Grants of \$500 per project to pursue preliminary research or demonstrate an initial proof-of-concept/prototypes. URI Phase-2 Student Seed Grants provides up to \$3,000 per project to pursue research further or develop a complete prototype. Funds can only be used to order project supplies and prototyping through the Office of Undergraduate Research and Innovation. Phase-2 proposals may be submitted by former Phase-1 Student Seed Grant winners who have completed Phase-1 work, as well as new students who have a research or product idea that has shown the preliminary proof of concept, market assessment or application-based research to establish the need, significance and basic approach. The student may prepare URI Student Phase-1 or Phase-2 Seed Grant proposals following the templates with [format and guidelines](#).

All projects proposals should be submitted by **February 25, 2019**. Awardees will have access to funds to start the project as early as March 22, 2019 and will formally present progress report at the subsequent URI workshops.

Special Funding Projects

Special funding is available for URI Phase-1 and Phase-2 projects in the following areas.

1. **Energy Monitoring:** The projects can focus in energy efficiency and monitoring covering one of more of the following topics:
 - o Development of hypotheses and analysis of the energy consumption data from Newark Public Schools (NPS) to determine possible course of action for NPS and other City buildings in Newark.

- Study of building energy and water systems in the government (state, city, county) buildings in Newark to make recommendations for Energy Efficiency Measures
 - Piloting Noveda (<https://www.noveda.com/>) monitoring system in one multifamily city buildings in Newark to study the impact of data visualization on behavior.
2. **Architecture and Design:** In the interest of expanding the reach of the URI program, Manish Patel would like to sponsor a special category for students from the CAD. These projects should have a path to market and not be theoretical. To remain in sync with the “R” of URI, the research component of the projects can be demonstrated by how students did product research, market need research and competitive research. Phase-1 projects can focus on the proof of concept and feasibility of the design. Phase-2 projects can focus on product development that are in “Ready-to-Launch” phase. The design projects may include but not limited to the following areas:
- Architecture
 - Digital Design
 - Industrial Design
 - Interior Design

Other areas of sponsored funding include medical devices, sensors, diabetes management and therapeutic intervention, sustainable systems, human-machine interface, human-computer interface, and data science and analytics.

Proposal Submission Deadlines

- Students working with a faculty member may submit **Track-1 Technology/Product Development and Innovation or Track-2: Application Based Research** proposals in the required format by **February 25, 2019**. Proposal Format Guidelines information are [here](#) and on the [URI website](#).
- Complete and submit the [Spring 2019 Student Seed Grant Application](#) by **February 25, 2019**. You will need to have your research proposal ready to upload when you fill out the online application form.
- Finalists selected for URI workshop presentation will be announced by **March 1, 2019**. Finalists are required to present their project through a PowerPoint presentations to the External Advisory Board following the presentation format posted on the website at the URI Workshop on **March 12, 2019** at the Campus Center Ballroom A from 2.00 PM to 5.30 PM.

URI Student Seed Grants Information Session

URI Student Seed Grants Information session on the proposal format and guidelines on how to prepare the URI Student Seed Grant proposals will be held on **February 7, 2019 from 12.00 PM to 1.30 PM** in Room 240, Campus Center. A pizza lunch will be served. URI External Advisory Board members will be available to discuss format requirements and review process for student seed grant proposals. Faculty advisors are also welcome to join the information session. The executive committee of the URI External Advisory Board includes:

Mr. Brian Kiernan (Chair, EAB and Executive Committee), Angel Investor, Executive VP and Chief Scientist (ret), InterDigital Communications Corp.

Mr. Govi Rao (Co-Chair, EAB and Executive Committee), President and CEO, Noveda Technologies (www.noveda.com)

Mr. Leon K. Baptiste (Executive Committee member), Principal and CEO, LB Electric Co., LLC (www.LBElectricco.com)

Mr. Nish Parikh (Executive Committee member), Founder and CEO, WebTeam Corporation (<http://www.webteamcorp.com>)

Mr. Manish Patel (Executive Committee member), CEO, TrickyWater LLC (www.trickywater.com)

Expected number of awards: up to 15

Any questions about the program or Information Session should be directed to Ms. Angela Retino, URI Program Administrator at aretino@njit.edu.

Grant Opportunity Alerts

Keywords and Areas Included in the Grant Opportunity Alert Section Below

NSF: Distributed Array of Small Instruments (DASI); Harnessing the Data Revolution (HDR); Institutes for Data-Intensive Research in Science and Engineering - Ideas Labs (I-DIRSE-IL); Mid-scale Research Infrastructure-2 (Mid-scale RI-2); Future of Work at the Human-Technology Frontier: Core Research (FW-HTF); NSF-CBMS Regional Research Conferences in the Mathematical Sciences; Macrosystems Biology and NEON-Enabled Science (MSB-NES) ; Research on Biological Systems; Mid-scale Research Infrastructure-1 (Mid-scale RI-1); National Robotics Initiative 2.0; Advanced Computing Systems & Services; Campus Cyberinfrastructure (CC*); Enabling Quantum Leap: Quantum Idea Incubator for Transformational Advances in Quantum Systems (QII - TAQS); Frontier Research in Earth Sciences (FRES)

NIH: Shared Instrumentation Grant (SIG) Program (S10); Shared Instrumentation for Animal Research (SIFAR) Grant Program (S10); High-End Instrumentation (HEI) Grant Program (S10); NHLBI Emerging Investigator Award (EIA) (R35); Summer Research Education Experience Program (R25) Bioengineering Research Grants (BRG) (R01) Bioengineering Research Partnerships (U01) Exploratory/Developmental Bioengineering Research Grants (EBRG) (R21) Resources for Technology Dissemination (U24); NIH Research Evaluation and Commercialization Hub (REACH) Awards (U01); Biomedical Research Facilities (C06); Graduate Research Training Initiative for Student Enhancement (G-RISE) (T32); Limited Competition: Clinical and Translational Science Award (CTSA) Program: Exploratory Collaborative Innovation Awards (R21); NIH Research Project Grant (Parent R01); NIH Exploratory/Developmental Research Grant Program (Parent R21); NIH Research Project Grant (Parent R01)

Department of Transportation: Infrastructure for Rebuilding America (INFRA) Grant Program

Department of Defense/US Army/DARPA/ONR: Measuring Biological Aptitude; Intelligence Community Centers for Academic Excellence (IC CAE) Program; Combat Casualty Care - Multi-Domain Lifesaving Trauma Innovations (MuLTI) Award; CDMRP PRMRP Discovery Award; CDMRP Peer Reviewed Medical Research Program Technology/Therapeutic Development Award; CDMRP Peer Reviewed Medical Research Program Focused Program Award; CDMRP Peer Reviewed Medical Research Program Investigator-Initiated Research Award; Technologies for Mixed-mode Ultra Scaled Integrated Circuits (T-MUSIC); Guaranteed Architecture for Physical Security (GAPS); Long Range BAA; Office of Naval Research (ONR) Navy and Marine Corps Science, Technology, Engineering & Mathematics (STEM), Microsystems Technology Office (MTO); AFRL/RXC Structural Materials Open BAA; BROAD AGENCY ANNOUNCEMENT (BAA) for Extramural Biomedical Research and Development; NRL Long Range Broad Agency Announcement (BAA) for Basic and Applied Research

Department of Education: Fulbright-Hays Group Projects Abroad (GPA) Short-Term Project)

EPA: A National Student Design Competition Focusing on People, Prosperity and the Planet - Safe and Sustainable Water Resources

Department of Energy: Notice of Intent to Issue Funding Opportunity Announcement No. DE-FOA-0002022; FY 2019 Bioenergy Technologies Office (BETO) Multi-topic Request for Information (RFI); Energy-Water Desalination Hub; Science Undergraduate Laboratory Internship (SULI); Transformational Sensing Capabilities for Monitoring the Subsurface; Advanced Systems Integration for Solar Technologies

NASA: ROSES 2018: Remote Sensing Theory for Earth Science; ROSES 2018: Advanced Information Systems Technology; Appendix B: Solicitation of Proposals for Flight and Ground Space Biology Research; ROSES 2018 B.13 Heliophysics DRIVE Science Centers; Second Heliophysics Space Weather Operations to Research

National Endowment of Humanities: Institutes for Advanced Topics in the Digital Humanities

Environment Research and Education Foundation: Research on Research on Sustainable Solid Waste Management and Recycling

Recent Research Grant and Contract Awards

Congratulations to faculty and staff on receiving research grant and contract awards!

PI: Farzan Nadim (PI)

Department: Biological Sciences

Grant/Contract Project Title: Neuromodulation of Neuronal Oscillations

Funding Agency: NIH

Duration: 03/01/18-01/31/20

PI: Roman Voronov (PI)

Department: Chemical and Material Engineering

Grant/Contract Project Title: 3D Microfluidic Scaffold for Cancer Drug Screening and Computer-Driven Tissue Engineering

Funding Agency: NJ Health Foundation

Duration: 02/15/19-02/15/20

In the News...

(National and Federal News Related to Research Funding and Grant Opportunities)

Worldwide Threat Assessment Report from US Intelligence Emphasizes on Research in AI, Biotech, Communications, Materials and Manufacturing:

The intelligence community's [Worldwide Threat Assessment](#) says U.S. adversaries are "investing heavily" in artificial intelligence, communication technologies, biotechnology, and materials sciences. "AI-enhanced systems are likely to be trusted with increasing levels of autonomy and decision making, presenting the world with a host of economic, military, ethical, and privacy challenges. Furthermore, interactions between multiple advanced AI systems could lead to unexpected outcomes that increase the risk of economic miscalculation or battlefield surprise. . . . Rapid advances in biotechnology, including gene editing, synthetic biology, and neuroscience, . . . introduce risks, such as the potential for adversaries to develop novel biological warfare agents, threaten food security, and enhance or degrade human performance. . . . A global resurgence in materials science and manufacturing technology is likely to enable advanced states to create materials with novel properties and engineer structures not previously possible, while placing high-end manufacturing capabilities within reach of small groups and individuals."

Artificial Intelligence and Autonomy: The global race to develop artificial intelligence (AI)—systems that imitate aspects of human cognition—is likely to accelerate the development of highly capable, application-specific AI systems with national security implications. As academia,

major companies, and large government programs continue to develop and deploy AI capabilities, AI-enhanced systems are likely to be trusted with increasing levels of autonomy and decision making, presenting the world with a host of economic, military, ethical, and 16 privacy challenges. Furthermore, interactions between multiple advanced AI systems could lead to unexpected outcomes that increase the risk of economic miscalculation or battlefield surprise.

Information and Communications: Foreign production and adoption of advanced communication technologies, such as fifth-generation (5G) wireless networks, most likely will challenge US competitiveness and data security, while advances in quantum computing foreshadow challenges to current methods of protecting data and transactions. US data will increasingly flow across foreign-produced equipment and foreign-controlled networks, raising the risk of foreign access and denial of service. Foreign deployment of a large-scale quantum computer, even 10 or more years in the future, would put sensitive information encrypted with today's most widely used algorithms at greatly increased risk of decryption.

Biotechnology: Rapid advances in biotechnology, including gene editing, synthetic biology, and neuroscience, are likely to present new economic, military, ethical, and regulatory challenges worldwide as governments struggle to keep pace. These technologies hold great promise for advances in precision medicine, agriculture, and manufacturing, but they also introduce risks, such as the potential for adversaries to develop novel biological warfare agents, threaten food security, and enhance or degrade human performance.

Materials and Manufacturing: A global resurgence in materials science and manufacturing technology is likely to enable advanced states to create materials with novel properties and engineer structures not previously possible, while placing highend manufacturing capabilities within reach of small groups and individuals. These developments are already supplementing or displacing traditional methods in most areas of manufacturing, from complex rocket-engine components to plastic desktop-printed toys, and they are enabling the development of a new generation of engineered materials that combine different materials in complex geometries to alter the overall material properties.

Full report is posted on the website <https://www.dni.gov/files/ODNI/documents/2019-ATA-SFR---SSCI.pdf>

SHUTDOWN'S IMPACT ON R&D: "As science agencies reboot after the longest government shutdown in U.S. history, it is becoming clear that it will take them months to recover," reports the [American Institute of Physics' FYI bulletin](#). Separately, [Space.com](#) says the shutdown "temporarily halted development work on many NASA missions, as well as outside projects that depend on grant money from NASA and/or other government agencies, This could have serious financial consequences down the road." Administrator Jim Bridenstine said: "We didn't have a mass exodus — I think, had this gone on longer, we would have — but we did lose people, onesies and twosies across the agency and here at headquarters," he added.

Recovering Batteries' Critical Materials: The Department of Defense (DoD) recently released a new report discussing the risk of climate change on military installations located around the world. The report calls climate change a "national security issue" that has the potential to severely disrupt Department of Defense missions, installations and strategic operational plans. As climate change continues to progress, DoD needs to take these changes into consideration when developing future strategies and looking to bolster its resilience. The report notes that "DoD must be able to adapt current and future operations to address the impacts of a variety of threats and conditions, including those from weather and natural events."

The Department of Energy recently released a \$5.5 million funding opportunity announcement (FOA) to develop new technologies to profitably capture 90% of all lithium based batteries in the United States. The FOA has been released in tandem with Energy Secretary Rick Perry's announcement of a new Battery Recycling Research and Development (R&D) Center.

"America's dependence on foreign sources of critical materials undermines our energy security and national security," said Perry. "DOE will leverage the power of competition and the resources of the private sector, universities, and the National Laboratories to develop innovative recycling technologies, which will bolster economic growth, strengthen our energy security, and improve the environment."

The goal of the FOA, in conjunction with the new Battery R&D Center, is to develop new innovative solutions to collecting, storing, and transporting used lithium-ion batteries. The FOA will be rolled out in three phased that will foster the development of solutions from concept to prototype to demonstration. The Lithium-Ion Battery R&D Recycling Center will be led by the Argonne National Laboratory, National Renewable Energy Laboratory and the Oak Ridge National Laboratory.

ASME's [Capitol Update reports](#) that the FOA has been released in tandem with Energy Secretary [Rick Perry's announcement](#) of a new Battery Recycling Research and Development (R&D) Center.

Spending Agreements Already Reached: Science's Jeff Mervis [analyzes](#) the FY 2019 House-Senate deals already negotiated that look pretty good for research funding agencies.

NSF: The agency's top line of \$8.075 billion would be \$308 million, or 3.7%, higher than in 2018. (The administration had requested \$7.472 billion.) Its research account would grow by \$186 million, to \$6.52 billion, and its education programs would rise by \$8 million, to \$910 million.

The biggest winner would be its account for major new construction projects. NSF would get \$127 million to continue work on three regional-size research vessels, and \$103 million to begin renovations at its facilities in the Antarctic. NSF had only requested \$29 million to complete work on two ships, but earlier this year House appropriators finally gave in to the Senate's repeated demand for three ships. The bills also tell NSF to pay for the Antarctic modernizations, which will cost \$355 million over the next 5 years, from this account rather than its research account.

The House bill would allocate \$40 million, more than double NSF's request, for an ongoing initiative at colleges and universities with a large number of Hispanic students. It would also add \$16 million to NSF's \$160 million request for the Established Program to Stimulate Competitive Research, a 40-year-old program to help states that receive minimal NSF funding.

NASA: The space agency's science account would grow by 11%, to \$6.9 billion. That is \$230 million above House levels set last year when it was in Republican hands, and roughly \$1 billion above the administration's request.

Webinar and Events

Event: NSF Distinguished Lecture Series in Mathematical and Physical Sciences

Sponsor: NSF

When: March 25, 2019 from 2.00 PM

Website: http://sites.nationalacademies.org/deps/bmsa/deps_183972

Brief Description:

March 25, 2019, 2:00 p.m., Room E2020

"Cosmic Collisions, Gravitational Waves, and the Promise of Multi-Messenger Astrophysics"

Prof. Vicky Kalogera (Northwestern University)

April 15, 2019, 2:00 p.m., Room E3410

"Life Crystals"

Prof. Pupa Gilbert (University of Wisconsin)

May 20, 2019, 2:00 p.m., Room E2020

"Quantum Chemistry: Present and Future Directions"

Prof. Garnet Chan (California Institute of Technology)

To join the webinar: All Distinguished Lectures in Mathematical and Physical Sciences from 2014 through 2017 can be viewed on the web (please [click here](#)).

Event: Modeling Light-Matter Interactions for Photonics Applications

Sponsor: IEEE

When: On Demand

Website:

https://event.on24.com/eventRegistration/EventLobbyServlet?target=reg20.jsp&partnerref=NOemail&et_mid=2035965180&et_mid=83774691&eventid=1878151&sessionid=1&key=DB32A11B5BB2D38949B94433E163AC2D®Tag=&sourcepage=register

Brief Description: In this webinar, an approach to accurately account for linear optical dispersion, nonlinear optics effects, and gain in light-matter interaction will be presented.

Alex Kildishev, a professor of electrical and computer engineering at Purdue University, will discuss the importance of generalizing the numerical description of light-matter interaction for more efficient time-domain multiphysics modeling in photonics. The need for generalization is illustrated by numerous physical effects, such as strong dispersion, saturation of absorption and reversed saturable absorption, as well as plasmon-enhanced stimulated and spontaneous emission in optical materials.

Time-domain multiphysics simulations in photonics are critical, as they provide information not attainable otherwise. Prof. Kildishev will show how to augment current mathematical models by including an additional set of custom equations, enabling highly accurate numerical simulations. Representative example cases will be shown. A live demo in COMSOL Multiphysics® will be an important part of this webinar. The demo will include the multiphysics modeling of representative optical effects in the time domain. The webinar will conclude with a Q&A session.

To join the webinar: Please register on the above URL.

Grant Opportunities

National Science Foundation

Grant Program: Distributed Array of Small Instruments (DASI)

Agency: National Science Foundation NSF 19-545

RFP Website: <https://www.nsf.gov/pubs/2019/nsf19545/nsf19545.htm>

Brief Description: The Distributed Arrays of Small Instruments (DASI) solicitation is designed to address the increasing need for high spatial and temporal resolution measurements to determine the local, regional, and global scale processes that are essential for addressing the fundamental questions in solar and space physics. This solicitation will be formally divided into two tracks: 1) development of instrumentation for future deployment in arrays and 2) deployment and operation of existing instruments in distributed arrays. This DASI solicitation emphasizes both strong scientific merit and a well-developed plan for student training and involvement of a diverse workforce.

Awards: Standard Grants. Anticipated Funding: \$350,000.

Letter of Intent: Not required

Proposal Submission Deadline: April 19, 2019

Contacts: Carrie E. Black, telephone: (703) 292-2426, email: cblack@nsf.gov

- S. Irfan Azeem, telephone: (703) 292-8521, email: sazeem@nsf.gov
-

Grant Program: Harnessing the Data Revolution (HDR): Institutes for Data-Intensive Research in Science and Engineering - Ideas Labs (I-DIRSE-IL)

Agency: National Science Foundation NSF 19-543

RFP Website: <https://www.nsf.gov/pubs/2019/nsf19543/nsf19543.htm>

Brief Description: NSF's [*Harnessing the Data Revolution \(HDR\) Big Idea*](#) is a national-scale activity to enable new modes of data-driven discovery that will allow fundamental questions to be asked and answered at the frontiers of science and engineering. Through this NSF-wide activity, HDR will generate new knowledge and understanding, and accelerate discovery and innovation. The HDR vision is realized through an interrelated set of efforts in:

- Foundations of data science;
- Algorithms and systems for data science;
- Data-intensive science and engineering;
- Data cyberinfrastructure; and
- Education and workforce development.

Each of these efforts is designed to amplify the intrinsically multidisciplinary nature of the emerging field of data science. The HDR Big Idea will establish theoretical, technical, and ethical frameworks that will be applied to tackle data-intensive problems in science and engineering, contributing to data-driven decision-making that impacts society.

This solicitation describes one or more Ideas Lab(s) on Data-Intensive Research in Science and Engineering (DIRSE) as part of the HDR Institutes activity. These Ideas Labs represent one path of a conceptualization phase aimed at developing Institutes as part of the NSF investment in the HDR Big Idea.

The HDR Institutes activity seeks to create an integrated fabric of interrelated institutes that can accelerate discovery and innovation in multiple areas of data-intensive science and engineering. The HDR Institutes will achieve this by harnessing diverse data sources and developing and applying new methodologies, technologies, and infrastructure for data management and analysis. The HDR Institutes will support convergence between science and engineering research communities as well as expertise in data science foundations, systems, applications, and cyberinfrastructure. In addition, the HDR Institutes will enable breakthroughs in science and engineering through collaborative, co-designed programs to formulate innovative data-intensive approaches to address critical national challenges.

Awards: Standard Grants. Anticipated Funding: \$20,000,000.

Preliminary Proposal Due Date(s) (required) (due by 5 p.m. submitter's local time):

March 4, 2019 (revised date)

Proposal Submission Deadline: June 19, 2019

Contacts: Nandini Kannan, MPS/DMS, telephone: (703) 292-8104, email: nakannan@nsf.gov

- Amy Walton, CISE/OAC, telephone: (703) 292-4538, email: awalton@nsf.gov
 - Eva Zanzerkia, GEO/EAR, telephone: (703) 292-4734, email: ezanzerk@nsf.gov

Grant Program: Mid-scale Research Infrastructure-2 (Mid-scale RI-2)

Agency: National Science Foundation NSF 19-542

RFP Website: <https://www.nsf.gov/pubs/2019/nsf19542/nsf19542.htm>

Brief Description: The need for a well-defined NSF mid-scale funding program has been recognized by stakeholders in the scientific community and by Congress in the American Innovation and Competitiveness Act (AICA) of 2017. As one of four "process ideas" in the NSF suite of 10 Big Ideas, the Mid-scale Research Infrastructure Program is aimed at transforming scientific and engineering

research fields as well as science, technology, engineering and mathematics (STEM) education research fields by making available new capabilities, while simultaneously training early-career researchers in the development, design, and construction of cutting-edge infrastructure.

The NSF Mid-scale Research Infrastructure-2 Program (Mid-scale RI-2) supports implementation of projects that comprise any combination of equipment, instrumentation, computational hardware and software, and the necessary commissioning and human capital in support of implementation of the same. The total cost for Mid-scale RI-2 projects ranges from \$20 million to below the minimum award funded by the Major Research Equipment and Facilities Construction (MREFC) Program, currently \$70 million. Mid-scale RI-2 projects will directly enable advances in any of the research domains supported by NSF, including STEM education. Projects may also include upgrades to existing research infrastructure.

The Mid-scale RI-2 Program emphasizes strong scientific merit and response to an identified need of the research community, technical and managerial readiness for implementation, and a well-developed plan for student training and involvement of a diverse workforce in mid-scale facility development, and/or associated data management.

Mid-scale RI-2 will consider only the implementation (typically construction or acquisition) stage of a project, including a limited degree of advanced development immediately preparatory to implementation. It is thus intended that Mid-scale RI-2 will support projects in high states of readiness for implementation, i.e., those that have already matured through previous developmental investments. Accordingly, Mid-scale RI-2 does not support pre-implementation (early-stage design or development). Mid-scale RI-2 also does not support post-implementation research, operations or maintenance, the anticipated source(s) of which are expected to be discussed in the proposal.

Awards: Cooperative Agreement. Anticipated Funding: \$150,000,000.

Grant Program: Future of Work at the Human-Technology Frontier: Core Research (FW-HTF)

Agency: National Science Foundation NSF 19-541

RFP Website: <https://www.nsf.gov/pubs/2019/nsf19541/nsf19541.htm>

Brief Description: The Future of Work at the Human-Technology Frontier (FW-HTF), one of the Big Ideas, is one mechanism by which NSF is responding to the challenges and opportunities for the future of jobs and work. The overarching vision is to support convergent research to understand and develop the human-technology partnership, design new technologies to augment human performance, illuminate the emerging socio-technological landscape, understand the risks and benefits of new technologies, understand and influence the impact of artificial intelligence on workers and work, and foster lifelong and pervasive learning.

The landscape of jobs and work is changing at unprecedented speed, enabled by advances in computer and engineering technologies such as artificial intelligence and robotics, deeper understanding of societal and environmental change, advances in the learning sciences, pervasive, intelligent, and autonomous systems, and new conceptions of work and workplaces. This technological and scientific revolution presents a historical opportunity to the Nation and its people, in the creation of new industries and occupations, enhanced productivity and quality of work life, and the potential for more people to participate in the workforce, ultimately yielding sustained innovation and global leadership. But, as history teaches, such changes also come with risks. Some risks are immediate, such as jobs lost to

automation or demand for skills not met by current educational pathways. Other equally important risks include new security threats, algorithmic biases, unanticipated legal consequences including privacy implications, dependence on technology and erosion of human knowledge and skills, inadequate workplace policies and practices, or undesirable impact on the built environment.

The specific objectives of the Future of Work at the Human-Technology Frontier program are (1) to facilitate convergent research that employs the joint perspectives, methods, and knowledge of computer science, engineering, learning sciences, research on education and workforce training, and social, behavioral, and economic sciences; (2) to encourage the development of a research community dedicated to designing intelligent technologies and work organization and modes inspired by their positive impact on individual workers, the work at hand, the way people learn and adapt to technological change, creative and supportive workplaces (including remote locations, homes, classrooms, or virtual spaces), and benefits for social, economic, and environmental systems at different scales; (3) to promote deeper basic understanding of the interdependent human-technology partnership to advance societal needs by advancing design of intelligent work technologies that operate in harmony with human workers, including consideration of how adults learn the new skills needed to interact with these technologies in the workplace, and by enabling broad workforce participation, including improving accessibility for those challenged by physical or cognitive impairment; and (4) to understand, anticipate, and explore ways of mitigating potential risks arising from future work at the human-technology frontier. Ultimately, this research will advance our understanding of how technology and people interact, distribute tasks, cooperate, and complement each other in different specific work contexts of significant societal importance. It will advance the knowledge base related to worker education and training and formal and informal learning to enable all potential workers to adapt to changing work environments. It will advance our understanding of the links between the future of work at the human-technology frontier and the surrounding society, including the intended potential of new technologies and the unintended consequences for workers and the well-being of society.

For the purposes of this solicitation, work is defined as mental or physical activity to achieve tangible benefit such as income, profit, or community welfare. The Future of Work at the Human-Technology Frontier is, in turn, a conceptualization of work in the future that will be enabled or improved by advances in intelligent technology and their synergistic integration with human skill to achieve broad participation in the workforce and improve the social, economic, and environmental well-being of society. To reach this goal, research is sought that is anchored in work. Proposals must clearly define the work and work context addressed by the research. Technology should be integrated with learning sciences, research on education and workforce training, and social, behavioral, and economic science perspectives to advance the science of the human-technology team. Potential results should contribute to fundamental advances in the science and technology of future workforce development and education, work environments, and positive work outcomes for workers and society at large. Proposals are encouraged that are oriented toward the future of work at the human-technology frontier and that are not overly couched in current technology or work practices.

Awards: Standard Grants. Anticipated Funding: \$30,000,000

Two classes of proposals will be considered through this solicitation:

1. FW-HTF Planning Grants (FW-HTF-P) may be requested for a total budget not to exceed \$150,000 for a period of 1 year.
2. FW-HTF Research Grants (FW-HTF-R) may be requested at two levels:
 - a. Medium FW-HTF-R proposals may request support for a period of up to 3 years, with a total budget not to exceed \$1,500,000.
 - b. Large FW-HTF-R proposals may request support for a period of up to 4 years, with a total budget between \$1,500,001 and \$3,000,000.

Letter of Intent: Not required

Proposal Submission Deadline: March 06, 2019

Grant Program: NSF-CBMS Regional Research Conferences in the Mathematical Sciences

Agency: National Science Foundation NSF 19-539

RFP Website: <https://www.nsf.gov/pubs/2019/nsf19539/nsf19539.htm>

Brief Description: The NSF-CBMS Regional Research Conferences in the Mathematical Sciences are a series of five-day conferences that usually feature a distinguished lecturer delivering ten lectures on a topic of important current research in one sharply focused area of the mathematical sciences. CBMS refers to the Conference Board of the Mathematical Sciences, which publicizes the conferences and disseminates the resulting conference materials. Support is provided for about 30 participants at each conference. Proposals should address the unique characteristics of the NSF-CBMS conferences, outlined in the Program Description.

Awards: Standard Grants. Anticipated Funding: \$350,000.

Letter of Intent: Not required

Proposal Submission Deadline: April 26, 2019

Contacts: J. Matthew Douglass, telephone: (703) 292-2467, email: mdouglas@nsf.gov

**Grant Program: Macrosystems Biology and NEON-Enabled Science (MSB-NES)
Research on Biological Systems at Regional to Continental Scales**

Agency: National Science Foundation NSF 19-538

RFP Website: <https://www.nsf.gov/pubs/2019/nsf19538/nsf19538.htm>

Brief Description: The Macrosystems Biology and NEON-Enabled Science (MSB-NES): Research on Biological Systems at Regional to Continental Scales program will support quantitative, interdisciplinary, systems-oriented research on biosphere processes and their complex interactions with climate, land use, and invasive species at regional to continental scales as well as training activities to enable groups to conduct Macrosystems Biology and NEON-Enabled Science research.

Proposers are encouraged to use NEON resources, and proposals for substantive and innovative NEON-enabled research will be prioritized for funding. Substantive NEON-enabled projects rely on data and/or samples collected by NEON, co-locate research activities at NEON sites, and/or develop tools that will explicitly enhance the processing, use, and/or analysis of NEON data or collections within the context of Macrosystems Biology research questions.

Awards: Standard Grants. Anticipated Funding: \$9,000,000

Macrosystems Research Awards (MRA). Awards to advance Macrosystems Biology research broadly, including substantively NEON-enabled research, and innovative training to conduct this research. These awards may be up to 5 years in duration; 3 to 5 awards are anticipated. These awards will average \$1,000,000.

Macrosystems Small Awards (MSA). Awards employing targeted approaches to advance understanding of regional to continental-scale processes, or addressing a theoretical challenge such as scaling or teleconnections, and prioritizing the use or development of NEON data and/or infrastructure. Proposals from early career investigators remain a priority. These awards will be limited to \$300,000 and up to 3 years in duration; 13 to 18 awards are anticipated.

Budget and duration should reflect the scope and complexity of the work proposed. Proposal budgets should be generated with attention to the amount of funding available and the expected number of awards.

Letter of Intent: Not required

Proposal Submission Deadline: February 25, 2019

Grant Program: Mid-scale Research Infrastructure-1 (Mid-scale RI-1)**Agency: National Science Foundation NSF 19-537****RFP Website:** <https://www.nsf.gov/pubs/2019/nsf19537/nsf19537.htm>

Brief Description: In 2016, the National Science Foundation (NSF) unveiled a set of “Big Ideas,” 10 bold, long-term research and process ideas that identify areas for future investment at the frontiers of science and engineering (see https://www.nsf.gov/news/special_reports/big_ideas/index.jsp). The Big Ideas represent unique opportunities to position our Nation at the cutting edge of global science and engineering leadership by bringing together diverse disciplinary perspectives to support convergence research. As such, when responding to this solicitation, even though proposals must be submitted to the Office of Integrative Activities, once received, the proposals will be managed by a cross-disciplinary team of NSF Program Directors.

Please consult NSF's [Large Facilities Manual](#) (LFM) and its successor to be published as the Major Facilities Guide (MFG) for definitions of terms used in this solicitation, such as the Project Execution Plan. Note that Project Execution Plans should be appropriate for the complexity of the project, and may not require all of the elements described in the LFM/MFG.

NSF-supported science and engineering research increasingly relies on cutting-edge infrastructure. With its Major Research Instrumentation (MRI) program and Major Research Equipment and Facilities Construction (MREFC) projects, NSF supports infrastructure projects at the lower and higher ends of infrastructure scales across science and engineering research disciplines. The Mid-scale Research Infrastructure Big Idea is intended to provide NSF with an agile, Foundation-wide process to fund experimental research capabilities in the mid-scale range between the MRI and MREFC thresholds. Within Mid-scale RI-1, proposers may submit two types of projects, “Implementation” and “Design”. Design and Implementation projects may comprise any combination of equipment, infrastructure, computational hardware and software, and necessary commissioning. Design includes planning (preliminary and final design) of research infrastructure with an anticipated total project cost that is appropriate for future Mid-scale RI-1, Mid-scale RI-2 or MREFC-class investments. Mid-scale RI-1 uses an inclusive definition of implementation, which can include traditional stand-alone construction or acquisition and can include a degree of advanced development leading immediately to final system acquisition and/or construction.

Mid-scale RI-1 "Implementation" projects may have a total project cost ranging from \$6 million up to below \$20 million. Projects must directly enable advances in fundamental science, engineering or science, technology, engineering and mathematics (STEM) education research in one or more of the research domains supported by NSF. Implementation projects may support new or upgraded research infrastructure. Only Mid-scale RI-1 "Design" projects may request less than \$6 million, with a minimum request of \$600,000 and a maximum request below \$20 million as needed to prepare for a future mid-scale or larger infrastructure implementation project. (Successful award of a Mid-scale RI-1 design project does not imply NSF commitment to future implementation of that project.)

Awards: Standard Grants or Cooperative Agreements. Anticipated Funding: \$60,000,000

Letter of Intent: See Below

Proposal Submission Deadline:

Grant Program: National Robotics Initiative 2.0: Ubiquitous Collaborative Robots (NRI-2.0)

Agency: National Science Foundation NSF 19-536

RFP Website: <https://www.nsf.gov/pubs/2019/nsf19536/nsf19536.htm>

Brief Description: The NRI-2.0 program builds upon the original National Robotics Initiative (NRI) program to support fundamental research in the United States that will accelerate the development and use of collaborative robots (co-robots) that work beside or cooperatively with people. The focus of the NRI-2.0 program is on **ubiquity**, which in this context means seamless integration of co-robots to assist humans in every aspect of life.

The program supports four main research thrusts that are envisioned to advance the goal of ubiquitous co-robots: **scalability**, **customizability**, **lowering barriers to entry**, and **societal impact**. Topics addressing **scalability** include how robots can collaborate effectively with multiple humans or other robots; how robots can perceive, plan, act, and learn in uncertain, real-world environments, especially in a distributed fashion; and how to facilitate large-scale, safe, robust and reliable operation of robots in complex environments. **Customizability** includes how to enable co-robots to adapt to specific tasks, environments, or people, with minimal modification to hardware and software; how robots can personalize their interactions with people; and how robots can communicate naturally with humans, both verbally and non-verbally. Topics in **lowering barriers to entry** should focus on lowering the barriers for conducting fundamental robotics research and research on integrated robotics application. This may include development of open-source co-robot hardware and software, as well as widely-accessible testbeds. Outreach or using robots in educational programs do not, by themselves, lower the barriers to entry for robotics research. Topics in **societal impact** include fundamental research to establish and infuse robotics into educational curricula, advance the robotics workforce through education pathways, and explore the social, economic, ethical, and legal implications of our future with ubiquitous collaborative robots.

Collaboration between academic, industry, non-profit, and other organizations is encouraged to establish better linkages between fundamental science and engineering and technology development, deployment, and use.

The NRI-2.0 program is supported by multiple agencies of the federal government including the National Science Foundation (NSF), the U.S. Department of Agriculture (USDA), the U.S. Department of Energy (DOE), the National Aeronautics and Space Administration (NASA), and the U.S. Department of Defense (DOD). Questions concerning a particular project's focus, direction and relevance to a participating funding organization should be addressed to that agency's point of contact, listed in section VIII of this solicitation.

Awards: Standard Grants or Cooperative Agreements. Anticipated Funding: \$35,000,000

Letter of Intent: Not required

Proposal Submission Deadline: February 19, 2019

Contacts: David Miller, CISE/IIS, telephone: (703) 292-4914, email: damiller@nsf.gov

- Radhakisan Baheti, ENG/ECCS, telephone: (703) 292-8339, email: rbaheti@nsf.gov
- Jordan Berg, telephone: (703) 292-5365, email: jberg@nsf.gov

Grant Program: Advanced Computing Systems & Services: Adapting to the Rapid Evolution of Science and Engineering Research

Agency: National Science Foundation NSF 19-534

RFP Website: <https://www.nsf.gov/pubs/2019/nsf19534/nsf19534.htm>

Brief Description: The intent of this solicitation is to request proposals from organizations willing to serve as service providers (SPs) within the NSF Innovative High-Performance Computing (HPC) program to provide advanced cyberinfrastructure (CI) capabilities and/or services in production operations to support the full range of computational- and data-intensive research across all of science and engineering (S&E). The current solicitation is intended to complement previous NSF investments in advanced computational infrastructure by provisioning resources, broadly defined in this solicitation to include systems and/or services, in two categories:

- Category I, Capacity Systems: production computational resources maximizing the capacity provided to support the broad range of computation and data analytics needs in S&E research; and
- Category II, Innovative Prototypes/Testbeds: innovative forward-looking capabilities deploying novel technologies, architectures, usage modes, etc., and exploring new target applications, methods, and paradigms for S&E discoveries.

Resources supported through awards from this solicitation will be incorporated into and allocated as part of NSF's Innovative HPC program. This program complements investments in [leadership-class computing](#) and funds a federation of nationally-available HPC resources that are technically diverse and intended to enable discoveries at a computational scale beyond the research of individual or regional academic institutions. NSF anticipates that at least 90% of the provisioned system or services will be available to the S&E community through an open peer-reviewed national allocation process and be supported by community and other support services [such as those currently supported through eXtreme Science and Engineering Discovery Environment (XSEDE) 2.0 project-managed allocations recommended by the XSEDE Resource Allocation Committee (XRAC), and other activities intended to foster efficient coordination across resources], or an NSF-approved alternative that may emerge. If this is not feasible for the proposed system/services, proposers must clearly explain in detail why this is the case and how they intend to make the proposed system/services available to the national S&E community.

Awards: Cooperative Agreements. Anticipated Funding: \$10,000,000

Letter of Intent: Not Required

Proposal Submission Deadline: March 04, 2019

- Edward Walker, Program Director, CISE/OAC, telephone: (703) 292-4863, email: edwalker@nsf.gov
- Alejandro M. Suarez, Assistant Program Director, CISE/OAC, telephone: (703) 292-7092, email: alsuarez@nsf.gov

Grant Program: Campus Cyberinfrastructure (CC*)

Agency: National Science Foundation NSF 19-533

RFP Website: <https://www.nsf.gov/pubs/2019/nsf19533/nsf19533.htm>

Brief Description: The Campus Cyberinfrastructure (CC*) program invests in coordinated campus-level networking and cyberinfrastructure improvements, innovation, integration, and engineering for science applications and distributed research projects. Learning and workforce development (LWD) in cyberinfrastructure is explicitly addressed in the program. Science-driven requirements are the primary motivation for any proposed activity.

Awards: Standard Grant. Anticipated Funding: \$17,000,000

Letter of Intent: Not Required

Proposal Submission Deadline: February 20, 2019

Contacts: Kevin Thompson, Program Director, CISE/OAC, telephone: (703) 292-4220, email: kthompso@nsf.gov

- Deepankar (Deep) Medhi, Program Director, CISE/CNS, telephone: (703) 292-8950, email: dmedhi@nsf.gov

Grant Program: Enabling Quantum Leap: Quantum Idea Incubator for Transformational Advances in Quantum Systems (QII - TAQS)

Agency: National Science Foundation NSF 19-532

RFP Website: <https://www.nsf.gov/pubs/2019/nsf19532/nsf19532.htm>

Brief Description: The Quantum Idea Incubator for Transformational Advances in Quantum Systems (QII - TAQS) program is designed to support interdisciplinary teams that will explore highly

innovative, original, and potentially transformative ideas for developing and applying quantum science, quantum computing, and quantum engineering. Proposals with the potential to deliver new concepts, new platforms, and/or new approaches that will accelerate the science, computing, and engineering of quantum technologies are encouraged. Breakthroughs in quantum sensing, quantum communications, quantum simulations, or quantum computing systems are anticipated. This Quantum Idea Incubator solicitation aims to support the process of translating such ideas into reality.

This solicitation calls for proposals focused on interdisciplinary research that includes elements from the following thrust areas: (i) fundamental science such as, but not limited to, physics, chemistry, materials science, mathematics, biology, or geoscience, as well as foundational concepts and techniques in quantum information science and engineering; (ii) communication, computation, and modeling; and (iii) devices and engineered systems. Proposals must articulate how the project leverages and/or promotes advances in knowledge in the selected thrust areas. Proposals should be innovative and must focus on quantum functionality and must result in experimental demonstrations and/or transformative advances towards quantum systems and/or proof-of-concept validations. Competitive proposals will come from an interdisciplinary research team led by at least three investigators who collectively contribute synergistic expertise from one or more engineering domains, from mathematics, computational and/or computer and information science, and from one or more physical, chemical, biological, or materials science domains. Proposals will be judged on how likely the integrated effort is to lead to transformative advances in quantum systems. Both fundamental and applied topics are encouraged.

Awards: Standard Grants. Anticipated Funding: \$26,000,000

Letter of Intent: Required: January 07, 2019

Proposal Submission Deadline:

- **Preliminary Proposal Due Date(s) (required)** (due by 5 p.m. submitter's local time):
February 21, 2019

- **Full Proposal Deadline(s)** (due by 5 p.m. submitter's local time):
May 24, 2019

Grant Program: Frontier Research in Earth Sciences (FRES)

Agency: National Science Foundation NSF 19-531

RFP Website: <https://www.nsf.gov/pubs/2019/nsf19531/nsf19531.htm>

Brief Description: The FRES program will support research in Earth systems from its core through the critical zone. The project may focus on all or part of the surface, continental lithospheric, and deeper Earth systems over the entire range of temporal and spatial scales. FRES projects will typically have a larger scientific scope and budget than those considered for funding by core programs in the Division of Earth Sciences (EAR). FRES projects may be interdisciplinary studies that do not fit well within the core programs or cannot be routinely managed by sharing between core programs. Innovative proposals within a single area with results that will have broad relevance to Earth Science research are also encouraged. Investigations may employ any combination of field, laboratory, and computational studies with observational, theoretical, or experimental approaches. Projects should be focused on topics that meet the guidelines for research funded by the Division of Earth Sciences.

Awards: Standard Grants. Anticipated Funding: \$12,000,000

Letter of Intent: Not Required

Proposal Submission Deadline: February 20, 2019

National Institutes of Health

Grant Program: Shared Instrumentation Grant (SIG) Program (S10 Clinical Trial Not Allowed)

Agency: National Institutes of Health PAR-19-179

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PAR-19-179.html>

Brief Description: The purpose of this funding opportunity is to continue the Shared Instrumentation Grant (SIG) Program administered by ORIP. The objective of the Program is to make available to institutions expensive research instruments that can only be justified on a shared-use basis and that are needed for NIH-supported projects in basic, translational or clinical biomedical and bio-behavioral research. The SIG Program provides funds to purchase or upgrade a single item of expensive, state-of-the-art, specialized, commercially available instrument or an integrated instrumentation system. An integrated instrumentation system is one in which the components, when used in conjunction with one another, perform a function that no single component could provide. The components must be dedicated to the system and not used independently.

Types of supported instruments include, but are not limited to: X-ray diffractometers, mass spectrometers, nuclear magnetic resonance (NMR) spectrometers, DNA and protein sequencers, biosensors, electron and light microscopes, cell sorters, and biomedical imagers. Applications for "stand alone" computer systems (supercomputers, computer clusters and data storage systems) will only be considered if the system is solely dedicated to biomedical research.

All instruments, integrated systems, and computer systems must be dedicated to research only.

Award: Applications will be accepted that request a single, commercially available instrument or an integrated system. The minimum award is \$50,000 of direct costs. There is no upper limit on the cost of the instrument, but the maximum award is \$600,000 of direct costs. Since the cost of the various instruments will vary, it is anticipated that the amount of the award will also vary. S10 awards do not allow indirect costs.

Letter of Intent: Not required

Deadline: May 31, 2019, by 5:00 PM local time at the applicant organization. All types of applications allowed for this funding opportunity are due on this date.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: Shared Instrumentation for Animal Research (SIFAR) Grant Program (S10 Clinical Trial Not Allowed)

Agency: National Institutes of Health PAR-19-178

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PAR-19-178.html>

Brief Description: The Shared Instrumentation for Animal Research (SIFAR) Grant Program invites groups of NIH-funded investigators engaged in biomedical research using animals to seek support for high-cost, state-of-the-art, commercially available scientific instruments. All requested instruments must be used on shared basis and enhance research that uses animals or related materials such as animal tissues, cells, or germplasm.

NIH-funded investigators use many different vertebrate and invertebrate animals in biomedical research, including worms, flies, fish, and rodents. This Funding Opportunity Announcement (FOA) supports instrumentation requests related to all animal species needed for NIH-supported biomedical research. NIH-funded investigators rely on a broad spectrum of technologies including nuclear magnetic resonance (NMR) spectrometers, mass spectrometers, DNA and protein sequencers, biosensors, electron and confocal microscopes, cell-sorters, and biomedical imagers. This FOA supports requests for all available technologies to enhance research using animals or related biological materials such as tissue, cells, or germplasm, for the ultimate benefit of human health.

Applicants may request clusters of instruments configured as specialized integrated systems or as a series of instruments to support a specific thematic area of biomedical research using animals. An integrated instrumentation system is one in which components, when used in conjunction with one other, perform a function that no single component could provide. A series of instruments may support a specialized workflow or provide synergetic functionalities to advance a thematic area of research. Any instrument, requested as a part of a cluster or a series, must be commercially available.

Award: Applications will be accepted for commercially available instruments only. At least one item of the requested instrumentation must cost at least \$50,000, after all applicable discounts. No instrument in a cluster can cost less than \$20,000, after all applicable discounts. There is no upper limit on the cost of each instrument, but the maximum award is \$750,000 of direct costs. Since the cost of the various instruments will vary, it is anticipated that the amount of the award will also vary. S10 awards do not allow indirect costs.

Letter of Intent: Not required

Deadline: May 31, 2019, by 5:00 PM local time at the applicant organization. All types of applications allowed for this funding opportunity are due on this date.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: High-End Instrumentation (HEI) Grant Program (S10 Clinical Trial Not Allowed)
Agency: National Institutes of Health PAR-19-177

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PAR-19-177.html>

Brief Description: The purpose of this funding opportunity is to continue the High-End Instrumentation (HEI) Grant Program administered by ORIP. The objective of the Program is to make available to institutions expensive research instruments that can only be justified on a shared-use basis and that are needed for NIH-supported projects in basic, translational or clinical areas of biomedical/behavioral research. The HEI Program provides funds to purchase or upgrade a single item of expensive, specialized, commercially available instrument or an integrated instrumentation system. An integrated instrumentation system is one in which the components, when used in conjunction with one another, perform a function that no single component could provide. The components must be dedicated to the system and not used independently.

Types of supported instruments include, but are not limited to: X-ray diffractometers, mass and nuclear magnetic resonance (NMR) spectrometers, DNA and protein sequencers, biosensors, electron and light microscopes, cell sorters, and biomedical imagers. Applications for "stand alone" computer systems (supercomputers, computer clusters and data storage systems) will only be considered if the instrument is solely dedicated to the research needs of NIH-supported investigators.

To facilitate the introduction of advanced cutting-edge instrumentation technologies providing new research capabilities to the biomedical field, a risk-return trade-off is allowed when certain classes of instruments or integrated systems are requested. Accordingly, the HEI program supports the acquisition of unique instruments or integrated systems developed by reliable commercial vendors, provided the instruments or all components of integrated systems are guaranteed by the manufacturer's one-year warranty. Due to the novelty of the technologies and the uniqueness of their implementation, specialized and technologically savvy groups of investigators will be qualified to lead the adoption of such instruments for biomedical research and the development of innovative biomedical applications. Therefore, if such novel instrument is requested, the applicant should demonstrate special technical expertise, merging physical and biological sciences. For integrated systems, the applicant must provide a detailed description about how the system will be put together and about technical expertise of the individual(s) who will be responsible for assembling of the system. The applicant must also provide a detailed description of training for the investigators listed in the application about the use of the novel technology to advance their research.

All instruments, integrated systems, and computer systems must be dedicated to research only.

Award: Applications will be accepted that request a single, commercially available instrument or integrated system. The minimum award is \$600,001 of direct costs. There is no upper limit on the cost of the instrument, but the maximum award is \$2,000,000 of direct costs. Since the cost of the various instruments will vary, it is anticipated that the size of the award will also vary. S10 awards do not allow indirect costs.

Letter of Intent: Not required

Deadline: May 31, 2019, by 5:00 PM local time at the applicant organization. All types of applications allowed for this funding opportunity are due on this date.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: NHLBI Emerging Investigator Award (EIA) (R35 Clinical Trial Optional)

Agency: National Institutes of Health RFA-HL-20-012

RFP Website: <https://grants.nih.gov/grants/guide/rfa-files/RFA-HL-20-012.html>

Brief Description: The purpose of the NHLBI Outstanding Investigator Award (OIA) is to promote scientific productivity and innovation by providing long-term support and increased flexibility to experienced Program Directors (PDs)/Principal Investigators (PIs) who are currently PDs/PIs on at least two NHLBI R01-equivalent awards and whose outstanding record of research demonstrate their ability to make major contributions to heart, lung, blood and sleep (HLBS) research. The NHLBI OIA is intended to support a research program, rather than a research project, by providing the primary and most likely sole source of NHLBI funding on individual grant awards.

This FOA is intended for established investigators who have the potential to conduct outstanding, innovative research. For this reason, eligibility is limited. Please refer to [Section III. Eligibility Information](#) for specific details.

It is anticipated that the NHLBI OIA will:

- Provide a stable funding environment, thereby improving productivity and facilitating ambitious, creative research;
- Increase scientific innovation by enabling flexibility in pursuing new research directions as they arise, since PDs/PIs will not be bound to specific aims proposed in advance of the studies;
- Reduce the time researchers spend writing grant applications and managing multiple grant awards, thereby allowing more time to be devoted to conducting research;
- Facilitate PDs/PIs commitment to research through increased stability of funding; and
- Enable PDs/PIs to devote more time and energy to mentoring junior scientists and providing scientific service.

An NHLBI OIA is intended to be the primary, and in most cases, sole support for all of the NHLBI-related research conducted by an investigator. Research supported through the NHLBI OIA should be related to HLB research as described within the scope of the NHLBI mission (<http://www.nhlbi.nih.gov/about/org/mission>), sleep disorders closely-coupled to HLB outcomes, or basic sleep and circadian regulation. Within these bounds, investigators will have the freedom to explore new avenues of inquiry that arise during the course of their research. Work involving the addition of human subjects, vertebrate animals, stem cells, select agents, or a new foreign component requires prior approval of NHLBI staff according to existing policies and procedures.

Award: Applications may request up to \$600,000 direct costs per year. Investigators are encouraged to request what is well-justified for their research program. In general, the request should be commensurate with the PD/PI's recent NHLBI support.

Letter of Intent: 30 days prior to the application due date

Deadline: March 15, 2016; February 15, 2017; February 15, 2018, by 5:00 PM local time of applicant organization. All types of non-AIDS applications allowed for this funding opportunity announcement are due on these dates. No late applications will be accepted for this Funding Opportunity Announcement.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: Summer Research Education Experience Program (R25 Clinical Trial Not Allowed)

Agency: National Institutes of Health PAR-19-164

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PAR-19-164.html>

Brief Description: The NIH Research Education Program (R25) supports research educational activities that complement other formal training programs in the mission areas of the NIH Institutes and Centers. The over-arching goals of the NIH R25 program are to: (1) complement and/or enhance the training of a workforce to meet the nation's biomedical, behavioral and clinical research needs; (2) encourage individuals from diverse backgrounds, including those from groups underrepresented in the biomedical and behavioral sciences, to pursue further studies or careers in research; (3) help recruit individuals with specific specialty or disciplinary backgrounds to research careers in biomedical, behavioral and clinical sciences; and (4) foster a better understanding of biomedical, behavioral and clinical research and its implications.

The over-arching goal of this R25 program is to support educational activities that foster a better understanding of biomedical, behavioral and clinical research and its implications. To accomplish the stated over-arching goal, this FOA will support creative educational activities with a primary focus on:

- **Research Experiences: Create educational activities** during the summer academic break. For example, for undergraduate students: to provide hands-on exposure to research, to reinforce their intent to graduate with a science degree, and/or to prepare them for graduate school admissions and/or careers in research; for high school and college science teachers: to enhance their science teaching.
- Support for science teachers at the K-12 and college level will be limited to those programs with a clear plan for how teachers will utilize their summer experience in their teaching during the school year.
- Applications that demonstrate the potential to impact students and teachers from diverse backgrounds are particularly encouraged.
- The proposed program needs to fit with the mission of the participating IC that the application is being submitted to and should not have a general STEM focus. For the specific ICs, the following represents mission focus areas (more information can be found on the Table of IC-Specific Information and Contacts page):
- **NIAAA** broadly encourages research that focuses on the following 5 goals: (1) identifying the mechanism of; (2) improve diagnosis and tracking of; (3) develop and improve strategies to prevent; and (4) develop and improve treatments for alcohol misuse, alcohol use disorder and alcohol-related consequences; and (5) enhance the public health impact of NIAAA-supported research.
- **NIDA**. Four main goals outline the broad scope of NIDA's strategic objectives: (1) Identify the biological, environmental, behavioral, and social causes and consequences of drug use and addiction across the lifespan; (2) Develop new and improved strategies to prevent drug use and its consequences; (3) Develop new and improved treatments to help people with substance use disorders achieve and maintain a meaningful and sustained recovery; (4) Increase the public health impact of NIDA research and programs.
- **NIEHS** will support applications focusing on summer research experiences in the environmental health sciences. Applications to NIEHS should provide research experiences that address or seek to understand how exposures to toxic environmental insults impact health, alter biologic processes, are linked to disease initiation, progression

- or morbidity, or activities that lead to the development of prevention and intervention strategies to reduce environmentally induced diseases.
- **NINDS.** The National Institute of Neurological Disorders and Stroke (NINDS) will support applications focusing on summer research experiences that address or seek fundamental knowledge about the brain and nervous system by supporting and conducting research on the healthy and diseased brain, spinal cord, and peripheral nerves and to use that knowledge to reduce the burden of neurological disease. NINDS will support a maximum of two awards per institution (identified by a unique DUNS number): one focused on students and one focused on science teachers.

Research education programs may complement ongoing research training and education occurring at the applicant institution, but the proposed educational experiences must be distinct from those training and education programs currently receiving Federal support. R25 programs may augment institutional research training programs (e.g., T32, T90) but cannot be used to replace or circumvent Ruth L. Kirschstein National Research Service Award (NRSA) programs.

Award: Although the size of award may vary with the scope of the Summer Research Program proposed, budgets cannot exceed \$100,000 direct costs per year.

Letter of Intent: 30 days prior to application due date

Deadline: [Standard dates](#) apply), by 5:00 PM local time of applicant organization. All [types of non-AIDS applications](#) allowed for this funding opportunity announcement are due on these dates.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: Bioengineering Research Grants (BRG) (R01 Clinical Trial Not Allowed)

Agency: National Institutes of Health PAR-19-158

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PAR-19-158.html>

Brief Description: Many major biomedical research problems are best addressed with a multidisciplinary approach that bridges the life and physical sciences. Principles and techniques in quantitative sciences such as physics, mathematics, chemistry, computer sciences, and engineering are increasingly applied to good effect in biomedical research. Bioengineering approaches integrate principles from diverse technical and biomedical fields, and the resulting multi-disciplinary research provides new understanding, innovative technologies, and new products that improve basic knowledge, human health, and quality of life. This FOA seeks to encourage collaborations of quantitative and physical scientists with biomedical researchers to catalyze the development of innovative bioengineering approaches to the solution of important problems in biomedical research, clinical investigations, and medical practice.

Significant projects may include, but are not limited to: validation and translation of promising tools for prevention, monitoring or intervention; development of quantitative, predictive models of complex biological systems; integration and optimization of technologies that significantly increase sensitivity, specificity, positive predictive value, negative predictive value, efficiency, or throughput of measurements to address unsolved biological or medical questions; or engineering and testing of delivery systems, tissues, therapeutics, implants, and prosthetics that may improve treatment and healthcare.

Innovation in this biomedical engineering FOA has a broad definition that includes development of new methods, ideas, or tools, integration of existing components into new combinations that deliver greater capabilities, new efficiencies, and/or greater effects. Overall impact of these advances may include reducing disparities in care, promoting wellness and independent living, increasing access to and utility of technologies to improve quality of life, reducing cost and complexity of procedures, and increasing throughput, sensitivity and specificity of diagnostic tests.

A project must clearly serve the mission of one or more of the NIH Institutes or Centers participating in this FOA. Investigators are encouraged to contact the designated [Scientific/Research contacts](#) for individual institute focus areas that will be supported. Applicants who seek to establish proof-

of-concept are encouraged to respond to the Exploratory Bioengineering Research Grant (EBRG) FOA [<https://grants.nih.gov/grants/guide/pa-files/PA-18-286.html>]. Large team projects with a specific goal that can be addressed in 5-10 years are encouraged to respond to the Bioengineering Research Partnership (BRP) FOA [<https://grants.nih.gov/grants/guide/pa-files/PA-18-208.html>].

Award: Application budgets are not limited but need to reflect the actual needs of the proposed project.

Letter of Intent: Not Required

Deadline: [Standard dates](#) apply), by 5:00 PM local time of applicant organization. All [types of non-AIDS applications](#) allowed for this funding opportunity announcement are due on these dates.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: Bioengineering Research Partnerships (U01 Clinical Trial Not Allowed)

Agency: National Institutes of Health PAR-19-156

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PA-19-156.html>

Brief Description: The primary objective of this FOA is to encourage basic, applied, or clinical bioengineering solutions to unmet needs in biological or biomedical research and clinical practice that can enhance the capabilities of end-users to improve our understanding of life science processes or the practice of medicine within 5 – 10 years. A BRP may bring together new or existing technologies to form creative solutions that have the potential to be widely adopted and improve human health. To deliver practical solutions within this timeframe, applicants are encouraged to use a design-directed research strategy with well-defined end goal(s) and intermediate, quantitative milestones. Goals may include, but are not limited to, establishing proof of concept, pre-commercial prototype production, licensure, release of software packages, designs or models, demonstrating the biological effectiveness of engineered constructs, elucidating the structural and functional relevance of biomolecules or tissues, first-in-human testing, or starting the investigational device exemption or investigational new drug process.

A second key objective is to encourage collaborations and partnerships among allied quantitative and biomedical disciplines. The value of strategic partnerships is well supported by the literature of both economics and science and technology policy, which documents greater success at research and development by groups that work in strategic alliances, often involving multiple institutions, compared to those working separately. In addition to the benefits to be derived from the research, the collaborations and partnerships can create opportunities for trans-disciplinary communication and training of a new generation of scientists who are capable of interacting across traditional technical boundaries. A Partnership typically consists of two to six partners from multiple institutions or multiple departments from the same institution, with each partner bringing critical strengths to the project. The team may require experience in technology development, appropriate model systems for validation, human factors research, regulatory approval, project management or commercialization to realize and disseminate a robust solution. Potential beneficiaries should be active participants in the partnership from the beginning, to provide assurance that proposed solutions will meet community needs. Partnerships with companies that have relevant expertise or may eventually engage in future commercialization or with organizations that can test and disseminate technologies are encouraged under the BRP program. Each PD/PI or collaborator is expected to provide substantive contributions to the intellectual or technical aspects of the project, and should be clearly differentiated from team members who supply necessary but not unique components or services.

Scope of the Program

Funding may be requested to develop, adapt, enhance, optimize, validate, or otherwise accelerate the adoption of promising bioengineering solutions, but not for support of commercial production or later stage (Phase II or Phase III) clinical trials. The approach used does not necessarily need to be extremely novel and may be based on integrating or scaling up existing technologies in untested ways. Overall impact of these new capabilities may include but is not limited to reducing disparities in care, providing new insight into basic biological processes, promoting wellness and independent living, engineering

integrated biological and physical systems, increasing access to and usability of technologies to improve quality of life, reducing cost and complexity of high-demand tools, or increasing throughput sensitivity and specificity of laboratory and clinical studies. Innovation for this program is based on a coherent plan to deliver emerging or new capabilities to end users, including through combination of proven approaches and recognizing their resources, workflow, and skills. Developing a technology is expected to require innovation, but novelty in and of itself is not a requirement. For this FOA, it is innovative to deliver a new capability to solve an unmet need. Innovation in this case is heightened by a technology that can be easily adopted into routine practice and will give users, for example biomedical researchers, healthcare professionals, or citizens, new understanding, or will change health care practice.

Projects must clearly serve the mission of one or more of the NIH Institutes or Centers (ICs) participating in this FOA. Investigators are strongly encouraged to contact the Scientific/Research contacts identified in this FOA for individual IC policies, as well as feedback on the scope and relevance of the proposed project and guidance on the development of appropriate goals and milestones. Those investigators seeking to establish proof of concept are encouraged to respond to the EBRG FOA (PA-18-286). Investigators proposing smaller team projects, tackling problems that cannot be addressed within 5 – 10 years, or that have open-ended aims, are encouraged to respond to the BRG FOA (PAR-18-206).

Award: Application budgets are not limited but need to reflect the actual needs of the proposed project.

Letter of Intent: 30 days prior to the application due date

Deadline: [Standard dates](#) apply), by 5:00 PM local time of applicant organization. All [types of non-AIDS applications](#) allowed for this funding opportunity announcement are due on these dates.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: Exploratory/Developmental Bioengineering Research Grants (EBRG) (R21 Clinical Trial Not Allowed)

Agency: National Institutes of Health PAR-19-149

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PAR-19-149.html>

Brief Description: The evolution and vitality of the biomedical sciences require a constant infusion of new ideas, techniques, and points of view. These may improve established technologies or may differ substantially from current thinking or practice. They may or may not yet be supported by substantial preliminary data. Therefore, an EBRG may propose evaluation of an unproven approach for which there are minimal or no preliminary data.

This FOA encourages improvements to current art and/or new ideas that arise from applications of engineering's problem-solving approaches to model systems, tools, agents, targets, and technologies that would advance basic or applied biomedical research, clinical research, clinical care delivery, or accessibility.

Many major biomedical research problems are suitably addressed with a multidisciplinary approach that bridges the life and physical sciences. Principles and techniques in allied quantitative sciences such as engineering, physics, mathematics, chemistry, computer sciences, and informatics, among others, have been applied to good effect in serving the multitude of NIH missions. Bioengineering approaches to problem-solving draw from diverse technical and scientific fields. Multidisciplinary research results have provided improvements to existing capabilities, and contributed new basic and practical understanding, products, technologies, and methods that add knowledge and improve human health and quality of life.

Specific Research Objectives

This FOA seeks to encourage quantitative and physical scientists to work with biomedical researchers to catalyze the use of bioengineering approaches for their potential to open new areas of biomedical investigation.

Although engineering applications submitted to the EBRG and other related announcements are often perceived as risky, experience shows that engineering training to anticipate errors, analyze what can go wrong, and to use both established and new principles to fix these issues do serve to manage most

risks. The EBRG, more so than related bioengineering announcements for mid-level and final developmental and translational stages, does have the risks of feasibility tests, early development, and gathering of preliminary data. Program controls these acceptable risks by limiting total direct cost funds to \$275,000 divided across two years. Therefore, EBRG applicants are encouraged to explain the significance of the proposed work, why potential impact outweighs risks, anticipate difficulties and discuss possible workarounds. Projects may include but are not limited to assessing the feasibility of a novel tool for clinical intervention, exploring new approaches to characterizing and modeling complex biological systems, improving and integrating existing technologies to provide a breakthrough in unsolved biomedical problems, or establishing preliminary evidence for a new, perhaps transformative bioengineering approach that challenges accepted paradigms.

Award: The combined budget for direct costs for the two-year project period may not exceed \$275,000. No more than \$200,000 may be requested in any single year.

Letter of Intent: Not Required

Deadline: [Standard dates](#) apply), by 5:00 PM local time of applicant organization. All [types of non-AIDS applications](#) allowed for this funding opportunity announcement are due on these dates.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: Resources for Technology Dissemination (U24 Clinical Trial Not Allowed)

Agency: National Institutes of Health RFA-EB-18-002

RFP Website: <https://grants.nih.gov/grants/guide/rfa-files/RFA-EB-18-002.html>

Brief Description: Technologies that accelerate the pace of biomedical research often exist in a single lab but could be of great benefit to other researchers if more broadly available. In many cases, technologies that have high value for the research enterprise do not have a viable commercialization path, and the originating laboratories have limited resources for their dissemination. The goal of this FOA is to facilitate non-commercial dissemination of cutting-edge, impactful imaging and biomedical engineering technologies from individual labs to the broader research community.

Technologies proposed for dissemination under this FOA should be highly relevant to one of the technology development [mission areas of NIBIB](#), including imaging or bioengineering devices, and biomedical software, methods, and imaging agents. Technologies should be novel and should have been prototyped and validated, ideally through peer-reviewed publications, and their high potential value to a user base should be evident in the application. The intent of this FOA is to support lab-to-lab transfer of novel biomedical technologies for which a commercial dissemination route is not a feasible option.

Projects should focus on transforming functioning prototypes into reliable, broadly usable tools and disseminating them to end users. This transformation could require minor technical improvements customized to meet end user's needs, but improvements should be within the scope of the prototyped technology and limited to applying proven techniques or existing resources. New technology development will not be supported under this FOA. Other allowable activities may include, but are not limited to, quality control and scale-up production necessary for beyond-the-lab dissemination, implementing methods on different hardware platforms, training for effective use of the technology, etc. Tool dissemination should begin no later than halfway into the project period.

The following are representative, but non-exclusive, examples of responsive applications:

- Provide unique electronic or optical units, systems, sub-systems or devices customized to fit the needs of a broad user base.
- Extend signal acquisition or image reconstruction methods across different hardware platforms.
- Design and develop interactive visualization interfaces, tutorials, and dissemination activities to broaden the use of computational models and analytical tools for multiple use cases.

- Provide diagnostic and therapeutic biomaterials, pre-cursors, or contrast agents to other research labs with instructions for optimal use.

Projects proposing development of novel or non-validated technologies are not responsive to this FOA, and applicants are encouraged to consider funding through other FOAs such as the NIH Research Project Grant Program ([R01](#)). Projects proposing activities directed toward commercialization are not responsive to this FOA, and applicants are encouraged to consider funding through the Small Business Innovation Research ([SBIR](#)) program or the Small Business Technology Transfer (STTR) program. Projects proposing the delivery of new technologies through academic-industry partnership are not responsive to this FOA, and applicants are encouraged to consider funding through the Bioengineering Research Partnership ([BRP](#)) program. Projects proposing clinical trials, service using existing equipment, or do not involve actual dissemination of technologies are not responsive to this FOA.

Award: Application budgets are limited to \$250,000 in direct costs in any project year.

Letter of Intent: 30 days prior to the application due date

Deadline: February 27, 2019, by 5:00 PM local time of applicant organization. All [types of non-AIDS applications](#) allowed for this funding opportunity announcement are due on this date.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: NIH Research Evaluation and Commercialization Hub (REACH) Awards (U01 Clinical Trial Not Allowed)

Agency: National Institutes of Health RFA-OD-19-014

RFP Website: <https://grants.nih.gov/grants/guide/rfa-files/RFA-OD-19-014.html>

Brief Description: The REACH program will address the problems that hinder the critical, early steps necessary to translate novel scientific advances into commercially viable diagnostics, devices, therapeutics, and tools that improve patient care and improve public health. Applicants from the qualifying institutions are invited to submit grant applications to accelerate the transition of research discoveries into impactful products that address unmet medical needs.

Each Hub will assemble diverse experts in biomedical product development, and will have the expertise to identify and source projects that have progressed to a point where a potential commercial product can be envisioned, but additional research and development efforts are required to define the product (demonstrate feasibility and proof-of-concept). Through a combination of in-house efforts and collaboration, each Hub funded under this FOA will perform functions to specifically address the critical knowledge and funding gaps that hinder the early steps needed to turn novel discoveries into technologies for biomedical advancement and patient care. The work supported by the REACH Hubs may include technical validation, market research, clarifying intellectual property position and strategy, clarifying regulatory or payer requirements, and investigating commercial or business opportunities.

Each Hub will:

- 1) Be governed by leadership experienced in biomedical product development with a specific focus on bringing biomedical technologies from research institutions to promising products that improve patient care and enhance health.
- 2) Develop the necessary collaborations and partnerships to meet the goals of this FOA.
- 3) Provide infrastructure and “know how” for soliciting, evaluating and selecting the most promising technology opportunities predicated on US disease burden medical need, scientific merit, and commercial potential that otherwise would not receive support for early-stage proof-of-concept work.
- 4) Establish processes to review and award funds to individual academic researchers and provide the resources and expertise required for early stage technology development.
- 5) Develop and implement market-focused project management oversight and decision-making processes.

6) Provide diverse academic innovators, including students and post-docs, access to skills development, hands-on entrepreneurial experience, educational and networking activities with linkages to local or virtual resources.

7) Implement a plan for transitioning to a self-sustaining structure.

Hub leadership must possess the necessary operational, business, and scientific expertise with a documented track record of success in transitioning technologies from the discovery phase to products that improve health. In addition, each Hub is required to demonstrate the core competencies necessary to fulfill the objectives of this FOA, including access to expertise in business development, market research, IP protection, regulatory and reimbursement processes, project management, pre-clinical studies, and appropriate domain experts. REACH will have the ability to support projects that cover various facets of technology development ranging from early stage laboratory-based technology feasibility or validation studies through pre-clinical testing. The successful REACH applicant will support the development of relevant technologies using a milestone-driven approach to transition technologies from the Hub to the next appropriate source of independent financing or strategic partner with the ultimate goal of commercialization.

Award: The maximum budget for a Hub is \$1,000,000 total costs per year. The maximum project period is 4 years.

Letter of Intent: 30 days prior to the application due date

Deadline: March 19, 2019 by 5:00 PM local time of applicant organization. All [types of non-AIDS applications](#) allowed for this funding opportunity announcement are due on this date.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date

Grant Program: Biomedical Research Facilities (C06 Clinical Trial Not Allowed)

Agency: National Institutes of Health PAR-19-128

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PAR-19-128.html>

Brief Description: NIH recognizes that modern physical infrastructure is necessary for the conduct of cutting-edge research. As science progresses and new technologies become available, dedicated space is required to house specialized equipment and to carry out novel experimental protocols. Projects will vary and depend on the present institutional infrastructure and long-term institutional research plans. Focusing on the advancement of science through the modernization of physical space will be a common and integral feature of all proposed projects. When completed, projects will have a significant institution-wide impact, bringing the research capacities and capabilities to a new level. An institution may request funds to modernize a core facility to create an environment required for research-driven specialized technological services. Likewise, funds may be requested to consolidate space for an institution-wide core which would provide streamlined workflows for contemporary multi-disciplinary investigations. Modernizing laboratory space used on a shared basis to meet the growing needs consistent with an institutional strategic vision for biomedical research is another example of a suitable request. A successful project will serve research teams and a broad range of research efforts.

Various factors are typically considered when developing or modernizing research infrastructure. For applications submitted to this FOA, defined research needs will drive the requests for modern engineering solutions. As science progresses and new technologies become available, required dedicated space must comply with relevant technical specifications to provide a well-controlled environment, to enable novel experimental approaches, and to house specialized equipment.

Modern physical infrastructure requires the implementation of advanced engineering designs. Some protocols may be only conducted in designated clean rooms, such as barrier facilities for pathogen-free research or space for synthesis of compounds meeting standards for human subject experiments. Certain equipment requires specially shielded rooms. In some situations, the precision of experimental setups requires accurate monitoring of laboratory environmental conditions. The laboratory space also needs to be adequately maintained to serve its desired function over the years. The formal structure of an

institutional core typically offers effective oversight to ensure that the required engineering standards of a space it occupies are met and maintained over time. Also, such centralized facilities are organized to provide rigorous scientific support for the conduct of research.

NIH recognizes the importance of all institutions of higher learning in contributing to the nation's research capacity. NIH intends to make available 25% of the funds to support projects from Institutions of Emerging Excellence (as defined in [42 USC 283k\(c\)\(2\)](#)). These institutions play a special role in advancing biomedical research as they leverage their research abilities to address problems of special relevance or unmet health needs. Often these institutions are located in the geographical areas in which deficits in research resources and health-related services/technologies may adversely affect health status of the population. Serving individuals from disadvantaged backgrounds by carrying activities related to training, health services, or biomedical research contributes to protecting health of such populations. Such institutions often serve as centers for dissemination of health information, training development, and advancement of research.

It is expected that all projects - both from research-intensive institutions and Institutions of Emerging Excellence - will have long-term effect and benefit the broad biomedical research community at the applicant institution by providing a modern research environment, accessible on a shared basis.

Award: Application budget is not limited but need to reflect the actual needs of the proposed project. The the maximum award budget is \$8,000,000. Applications with budget less than \$3,000,000 will not be considered. Since the scope of different projects will vary it is anticipated that the size of the awards will vary.

Letter of Intent: February 1, 2019

Deadline: March 4, 2019, by 5:00 PM local time of applicant organization..

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: Graduate Research Training Initiative for Student Enhancement (G-RISE) (T32)

Agency: National Institutes of Health PA-19-102

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PA-19-102.html>

Brief Description: The **Overarching Objective** of this Graduate Research Training Initiative for Student Enhancement program is to develop a diverse pool of well-trained Ph.D. biomedical scientists, who have the following technical, operational, and professional skills:

- A broad understanding across biomedical disciplines and the skills to independently acquire the knowledge needed to advance their chosen fields;
- The ability to think critically and independently, and to identify important biomedical research questions and approaches that push forward the boundaries of their areas of study;
- A strong foundation in scientific reasoning, rigorous research design, experimental methods, quantitative and computational approaches, and data analysis and interpretation;
- A commitment to approaching and conducting biomedical research responsibly, ethically, and with integrity;
- Experience initiating, conducting, interpreting, and presenting rigorous and reproducible biomedical research with increasing self-direction;
- The ability to work effectively in teams with colleagues from a variety of cultural and scientific backgrounds, and to promote inclusive and supportive scientific research environments;
- The skills to teach and communicate scientific research methodologies and findings to a wide variety of audiences (e.g., discipline-specific, across disciplines, and the public); and
- The knowledge, professional skills and experiences required to identify and transition into careers in the biomedical research workforce (i.e., the breadth of careers that sustain biomedical research in areas that are relevant to the NIH mission).

Diversity at all levels—from the kinds of science to the regions in which it is conducted to the backgrounds of the people conducting it— contributes to excellence in research training environments and strengthens the research enterprise. This FOA is intended to support outstanding research training programs that will enhance diversity at all levels. As part of a larger initiative to enhance diversity, the G-RISE program will support trainees earning a Ph.D. at research-active institutions.

Program Considerations

NIGMS intends to fund applications that propose feasible academic and research focused training programs that will enhance diversity in the biomedical workforce. Applicants are expected to identify training objectives (i.e., specific, measurable, and obtainable outcomes the program intends to achieve) and to develop plans to implement evidence-based training and mentoring activities that are grounded in the literature and from evaluations of existing relevant programs. Program objectives must align with the overarching goal of the G-RISE diversity enhancing program. Funded programs are expected to provide evidence of accomplishing the training objectives in progress reports and upon renewal, to make training and career outcomes publicly available, and are strongly encouraged to disseminate successful training practices to the broader community.

Institutional commitment and support for the proposed training program are important elements of the application. The G-RISE program may complement and synergize with other ongoing federally-supported predoctoral research training programs at the applicant institution (e.g., in the development of skills needed for careers in the biomedical research workforce); however, the G-RISE program goals and activities to achieve those goals must be distinct from related programs currently receiving federal support at the same institution. In cases where an institution has multiple NIGMS training grants, it is expected that these programs will seek to create administrative efficiencies to reduce costs and improve trainee services and outcomes. The training grant should be well integrated within one or more department(s)/program(s) and should exert a strong, positive influence on the development and execution of the curriculum, training opportunities, and mentoring. Training grant funds may not be used solely as a vehicle to provide stipends for trainees to conduct research.

NIGMS does not accept applications for predoctoral T32 programs proposing only short-term research training (T35). Programs proposing short-term research training should apply to the Kirschstein-NRSA Short-Term Institutional Research Training Grant Program (T35) exclusively reserved for predoctoral, short-term research training (see [PA-18-404](#) and subsequent reissuances but note that NIGMS does not participate in that FOA). NIGMS will not accept applications proposing combined predoctoral and postdoctoral training under this FOA.

Award: Application budgets are not limited but need to reflect the actual needs of the proposed project. NIGMS expects to fund programs at or below 20 trainees, as appropriate to the institutional capabilities. The maximum project period is 5 years.

Letter of Intent: Not Required

Deadline: May 21, 2019; May 21, 2020; May 21, 2021, by 5:00 PM local time of applicant organization. All [types of non-AIDS applications](#) allowed for this funding opportunity announcement are due on these dates. Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: Limited Competition: Clinical and Translational Science Award (CTSA) Program: Exploratory Collaborative Innovation Awards (R21 Clinical Trial Optional)

Agency: National Institutes of Health PAR-19-100

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PAR-19-100.html>

Brief Description: Translating biomedical discoveries into clinical applications is essential to improving human health. It is also a complex process with high costs and substantial failure rates. These failures can result in delays of years or decades before improved patient outcomes result from discoveries in biomedical research. Under NCATS' leadership, the CTSA Program supports a national consortium of medical research institutions — called hubs ? that work together to improve the translational research

process to get more treatments to more patients more quickly. The hubs collaborate locally, regionally, and nationally to catalyze innovation in training, research tools and processes.

The overall purpose of the CTSA program is to deliver scientific and systems change that solve the many outstanding problems limiting the efficiency, effectiveness, and reach of clinical translational research, and thus get more treatments to more patients more quickly across the country. To do that, the program focuses on widely appreciated systematic barriers including (exemplary only; not intended to be exhaustive or exclusive):

- Data interoperability
- Biomarker qualification process
- Regulatory science
- Clinical trial networks
- Patient recruitment
- Electronic Health Records for research
- Harmonized IRBs
- Clinical diagnostic criteria
- Clinical outcome criteria (e.g., PROs)
- Adaptive clinical trial designs
- Shortening time of intervention adoption
- Methods to better measure impact on health (or lack thereof)
- Data transparency/release
- Integration of project management
- Incentives/credit for team science
- Incentives/credit for health improvements
- Education/Training (scientific and cultural)
- Collaborative structures

Award: Application budgets need to reflect the actual needs of the proposed project. The combined budget for direct costs for the two-year project period may not exceed \$275,000. No more than \$200,000 may be requested in any single year.

Letter of Intent: 30 days prior to the application due date

Deadline: March 8, 2019, July 11, 2019, November 9, 2019, March 8, 2020, July 11, 2020, November 9, 2020, March 8, 2021, July 11, 2021, November 9, 2021 , by 5:00 PM local time of applicant organization. All [types of non-AIDS applications](#) allowed for this funding opportunity announcement are due on these dates. Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: NIH Research Project Grant (Parent R01 Basic Experimental Studies with Humans Required)

Agency: National Institutes of Health PA-19-091

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PA-19-091.html>

Brief Description: The NIH Research Project Grant (R01) supports a discrete, specified, circumscribed project in scientific areas that represent the investigators' specific interests and competencies and that fall within the mission of the participating NIH Institutes and Centers (ICs). The R01 is the original, and historically the oldest, grant mechanism used by the NIH to support health-related research and development.

Research grant applications are assigned to participating ICs based on receipt and referral guidelines, and many applications are assigned to multiple participating ICs with related research interests. Applicants are strongly encouraged to identify a participating IC that supports their area of research and contact Scientific/Research staff from relevant ICs to inquire about their interest in supporting the proposed research project. For specific information about the mission of each NIH IC, visit the [List of NIH Institutes, Centers, and Offices](#) website. All applications submitted to this Parent Funding

Opportunity Announcement must propose basic science experimental studies involving humans, otherwise referred to in [NOT-OD-18-212](#) as “prospective basic science studies involving human participants,” that fall within the NIH definition of a clinical trial and also meet the definition of basic research.

NIH defines basic research consistent with the definition of basic research in federal code, “the systematic study directed toward greater knowledge or understanding of the fundamental aspects of phenomena and of observable facts without specific applications towards processes or products in mind.” ([32 CFR 272.3](#)).

NIH defines a clinical trial as "A research study in which one or more human subjects are prospectively assigned to one or more interventions (which may include placebo or other control) to evaluate the effects of those interventions on health-related biomedical or behavioral outcomes." ([NOT-OD-15-015](#)). Types of studies that should submit under this FOA include studies that prospectively assign human participants to conditions (i.e., experimentally manipulate independent variables) and that assess biomedical or behavioral outcomes in humans for the purpose of understanding the fundamental aspects of phenomena without specific application towards processes or products in mind.

Award: Application budgets are not limited but need to reflect the actual needs of the proposed project.

Letter of Intent: Not Required

Deadline: [Standard dates](#) apply), by 5:00 PM local time of applicant organization. All [types of non-AIDS applications](#) allowed for this funding opportunity announcement are due on these dates.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: NIH Exploratory/Developmental Research Grant Program (Parent R21 Basic Experimental Studies with Humans Required)

Agency: National Institutes of Health PA-19-092

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PA-19-092.html>

Brief Description: The evolution and vitality of the biomedical, behavioral, and clinical sciences require a constant infusion of new ideas, techniques, and points of view. These may differ substantially from current thinking or practice and may not yet be supported by substantial preliminary data. Through the NIH Exploratory/Developmental Research Grant Program, the NIH seeks to foster the introduction of novel scientific ideas, model systems, tools, agents, targets, and technologies that have the potential to substantially advance biomedical, behavioral, and clinical research.

This program is intended to encourage new exploratory and developmental research projects. For example, such projects could assess the feasibility of a novel area of investigation or a new experimental system that has the potential to enhance health-related research. Another example could include the unique and innovative use of an existing methodology to explore a new scientific area. These studies may involve considerable risk but may lead to a breakthrough in a particular area, or to the development of novel techniques, agents, methodologies, models, or applications that could have a major impact on a field of biomedical, behavioral, or clinical research.

Applications for Exploratory/Developmental Research Grant awards should include projects distinct from those supported through the traditional R01 activity code. For example, long-term projects, or projects designed to increase knowledge in a well-established area, are not appropriate for this FOA. Applications submitted to this FOA should be exploratory and novel. These studies should break new ground or extend previous discoveries toward new directions or applications. Projects of limited cost or scope that use widely accepted approaches and methods within well-established fields are better suited for the [NIH Small Research Grant Program](#).

Applications are assigned to participating Institutes and Centers (ICs) based on receipt and referral guidelines and many applications are assigned to multiple participating ICs with related research interests. Applicants are encouraged to identify a participating IC that supports their area of research via the [R21 Basic Experimental Studies with Humans Required IC-Specific Scientific Interests and Contact website](#).

Award: The combined budget for direct costs for the two-year project period may not exceed \$275,000. No more than \$200,000 may be requested in any single year.

Letter of Intent: Not Required

Deadline: [Standard dates](#) apply), by 5:00 PM local time of applicant organization. All [types of non-AIDS applications](#) allowed for this funding opportunity announcement are due on these dates.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: NIH Research Project Grant (Parent R01 Clinical Trial Not Allowed)

Agency: National Institutes of Health PA-19-056

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PA-19-056.html>

Brief Description: The NIH Research Project Grant supports a discrete, specified, circumscribed project in scientific areas that represent the investigators' specific interests and competencies and that fall within the mission of the participating NIH Institutes and Centers (ICs). The R01 is the original, and historically the oldest, grant mechanism used by the NIH to support health-related research and development.

Research grant applications are assigned to participating ICs based on receipt and referral guidelines and applications may be assigned to multiple participating ICs with related research interests. Applicants are encouraged to identify a participating IC that supports their area of research via the [R01 IC-Specific Scientific Interests and Contact](#) website and contact Scientific/Research staff from relevant ICs to inquire about their interest in supporting the proposed research project.

This Funding Opportunity Announcement does not accept applications proposing clinical trial(s). For specific information about the mission of each NIH IC, visit the [List of NIH Institutes, Centers, and Offices](#) website.

Award: Application budgets are not limited but need to reflect the actual needs of the proposed project.

Letter of Intent: Not Required

Deadline: [Standard dates](#) apply, by 5:00 PM local time of applicant organization. All [types of non-AIDS applications](#) allowed for this funding opportunity announcement are due on these dates.

The first standard application due date for this FOA is February 5, 2019.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Department of Transportation

Grant Program: Infrastructure for Rebuilding America (INFRA) Grant Program

Agency: Department of Transportation NSFHP-19-INFRA19

Website: <https://www.transportation.gov/buildamerica/infragrants>

Brief Description: INFRA advances a grant program established in the FAST Act of 2015 and utilizes updated criteria to evaluate projects to align them with national and regional economic vitality goals and to leverage additional non-federal funding. The program will increase the impact of projects by leveraging federal grant funding and incentivizing project sponsors to pursue innovative strategies, including public-private partnerships. Additionally, the new program promotes the incorporation of innovative technology that will improve our transportation system. INFRA will also hold recipients accountable for their performance in project delivery and operations.

Awards: The Department will make awards under the INFRA program to both large and small projects. For a large project, the INFRA grant must be at least \$25 million. For a small project, the grant must be at least \$5 million. For each fiscal year of INFRA funds, 10 percent of available funds are reserved for small projects.

Proposal Deadline: March 4, 2019

Contact Information: For more information, visit: www.transportation.gov/INFRA.

Department of Defense/US Army/DARPA/ONR

Grant Program: Measuring Biological Aptitude

Agency: Department of Defense; DARPA HR001119S0021

Website:

https://www.fbo.gov/index?s=opportunity&mode=form&id=c4507cfbb9f9e355478a2394e3898015&tab=core&_cvview=1

Brief Description: The Measuring Biological Aptitude (MBA) program aims to address the need for a more capable fighting force by improving how an individual warfighter identifies, measures, and tracks personalized biomarkers to help achieve new levels of performance for specialized roles throughout their career. The MBA program will give warfighters the ability to understand, in real-time, the underlying biological processes that govern their own performance by elucidating the internal expression circuits (e.g., genetic, epigenetic, metabolomic, etc.) that shape military-relevant cognitive, behavioral, and physical traits. Simultaneously, the program will create new technologies for tracking these expression circuits in real time, providing instantaneous user feedback to aid the warfighter to be successful throughout training, assessment and selection, and mission execution for their desired military specialty.

Awards: Multiple awards are possible. The amount of resources made available to each performer under this BAA will depend on the quality of the proposals received and the availability of funds.

Proposal Deadline: Proposal Abstract Due Date and Time: February 28, 2019, 4:00 pm Eastern Standard Time
o Proposal Due Date and Time: April 8, 2019, 4:00 pm Eastern Standard Time
o BAA Closing Date: April 8, 2019
o Proposers Day – February 12, 2019 <https://events.sa-meetings.com/MBAPD2019>

Contact Information: The BAA Coordinator for this effort may be reached at: MBA@darpa.mil

Grant Program: FY 2019 Intelligence Community Centers for Academic Excellence (IC CAE) Program

Agency: Department of Defense; Defense Intelligence Agency HHM402-19-FOA-399

Website: <https://www.grants.gov/web/grants/search-grants.html>

Brief Description: Accessing the 2019 IC CAE Funding Opportunity Announcement, HHM402-19-FOA-399. New users of www.grants.gov website need to first register and obtain a user identifier and password to use for logging into the site. Once registered and logged into the website, an applicant can click the "Current Efforts" tab and select "Intelligence Community Centers for Academic Excellence FOA # HHM402-19-FOA-399" page under the list. "Questions/Answer" section will be developed where all can view responses to all questions and comments, including those submitted by other organizations. Answers will be posted as they are developed. ALL QUESTIONS ARE TO BE SENT TO EMAIL ~FOA399@dodiis.mil. Answers will be posted on Grants.gov.

Awards: Up to \$300,000; Anticipated Available Funding: \$12,000,000

Proposal Deadline: February 24, 2019

Contact Information: Anthony D Hawkins Grantor Phone 202 231 3756 ~FOA399@dodiis.mil

Grant Program: Combat Casualty Care - Multi-Domain Lifesaving Trauma Innovations (MuLTI) Award

Agency: Department of Defense Dept. of the Army – USAMRAA W81XWH-19-S-CCC1

Website: <https://ebrap.org/eBRAP/public/Program.htm>

Brief Description: The MuLTI Award will support the development of highly innovative materiel products and new ways, methods, or modifications to existing trauma practice (i.e., knowledge products) for future multi-domain operations (MDO) where evacuation capabilities may be significantly delayed or

unavailable. Projects should consider the varied expertise levels of the medical providers and the possible diverse environmental conditions. A focus is on enhancing capabilities at the point of greatest need, including life-saving interventions to be rendered immediately post-injury, during periods of prolonged care in theater, and during transport/en route care within and from theater. Medical materiel solutions are encouraged to include characteristics relevant to military use in austere, combat environments.

Focus Area 3 – Neurotrauma: The Neurotrauma Portfolio (NTP) is focused on closing military-relevant gaps across a broad range of research areas to improve the prevention, diagnosis, management, and treatment of TBI and related sequelae from point-of-injury through recovery. The NTP's goal is to decrease morbidity and mortality from neurotrauma, mitigate secondary brain injury across all TBI severities, and advance materiel and knowledge development to expand and develop new clinical practice guidelines, care algorithms, therapies, devices, and procedures that advance the decision-making capabilities of medical personnel, enabling earlier intervention and improved outcomes. NOTE: For studies proposing animal research, provide justification for the use of nongyrencephalic (lissencephalic) models of TBI. • Interventions to reduce the incidence and severity of secondary brain injury. • Novel intervention and stabilization (e.g., maintain glucose levels, brain oxygenation, and cerebral blood flow) approaches to moderate and severe TBI. • Simplified diagnostic capabilities (e.g., imaging) that do not require extensive interpretation by medical providers. • Novel biofluid-based TBI biomarkers. The biomarker(s) can be prognostic or diagnostic and address mild or moderate TBI severities. Biomarkers that apply to multiple TBI severities (mild or moderate) are preferred. • Development of field applicable treatments for post traumatic central nervous system (CNS) tissue preservation.

Awards: The JPC-6/CCCRP expects to allot approximately \$10.7 million (M) of the FY19, \$9.9M of the FY20, and \$9.5M of the FY21 DHP RDT&E appropriations to fund approximately 12 to 30 FY19 DMRDP JPC-6/CCCRP MuLTI Award proposals/applications, depending on the quality and number of proposals/applications received. Funding of applications received in response to this BAA is contingent upon the availability of Federal funds for this program. The funding estimated for this BAA is approximate and subject to realignment.

Proposal Deadline: Pre-Proposal/Pre-Application Submission Deadline: 5:00 p.m. Eastern time (ET), March 5, 2019 • Invitation to Submit a Proposal/Application: April 11, 2019 • Proposal/Application Submission Deadline: 11:59 p.m. ET, May 29, 2019

Contact Information: CDMRP Help Desk Phone 301-682-5507 Email: help@eBRAP.org

Grant Program: CDMRP PRMRP Discovery Award

Agency: Department of Defense Dept. of the Army – USAMRAA W81XWH-19-PRMRP-DA

Website: <https://ebrap.org/eBRAP/public/Program.htm>

Brief Description: The vision of the FY19 PRMRP is to improve the health, care, and well-being of all military Service members, Veterans, and beneficiaries. The PRMRP challenges the scientific and clinical communities to address the FY19 PRMRP Topic Areas with original ideas that foster new directions along the entire spectrum of research and clinical care. The program seeks applications in laboratory, clinical, behavioral, epidemiologic, and other areas of research to advance knowledge in disease etiology, improve prevention, detection, diagnosis, treatment, and quality of life for those affected by a relevant disease or condition, and to develop and validate clinical care or public health guidelines.

Awards: The intent of the PRMRP Discovery Award is to support innovative, non-incremental, highrisk/potentially high-reward research that will provide new insights, paradigms, technologies, or applications. Studies supported by this award are expected to lay the groundwork for future avenues of scientific investigation. The proposed research project should include a well formulated, testable hypothesis based on a sound scientific rationale and study design. The anticipated direct costs budgeted for the entire period of performance for an FY19 PRMRP Discovery Award will not exceed \$200,000.

Proposal Deadline: Pre-Application Submission Deadline: 5:00 p.m. Eastern time (ET), March 28, 2019 • Application Submission Deadline: 11:59 p.m. ET, April 11, 2019

Contact Information: CDMRP Help Desk Phone 301-682-5507 Email: help@eBRAP.org

Grant Program: CDMRP Peer Reviewed Medical Research Program Technology/Therapeutic Development Award

Agency: Department of Defense Dept. of the Army – USAMRAA W81XWH-19-PRMRP-TTDA

Website: <https://ebrap.org/eBRAP/public/Program.htm>

Brief Description: The vision of the FY19 PRMRP is to improve the health, care, and well-being of all military Service members, Veterans, and beneficiaries. The PRMRP challenges the scientific and clinical communities to address at least one of the FY19 PRMRP Topic Areas with original ideas that foster new directions along the entire spectrum of research and clinical care. The program seeks applications in laboratory, clinical, behavioral, epidemiologic, and other areas of research to advance knowledge in disease etiology, improve prevention, detection, diagnosis, treatment, and quality of life for those affected by a relevant disease or condition, and to develop and validate clinical care or public health guidelines.

Awards: The anticipated direct costs budgeted for the entire period of performance for an FY19 PRMRP TTDA award will not exceed \$3M.

Anticipated available funding: \$72,000,000

Proposal Deadline: Pre-Application Submission Deadline: 5:00 p.m. Eastern time (ET), March 14, 2019

• Invitation to Submit an Application: May 2019 • Application Submission Deadline: 11:59 p.m. ET, July 11, 2019

Contact Information: CDMRP Help Desk Phone 301-682-5507 Email: help@eBRAP.org

Grant Program: CDMRP Peer Reviewed Medical Research Program Focused Program Award

Agency: Department of Defense Dept. of the Army – USAMRAA W81XWH-19-PRMRP-FPA

Website: <https://ebrap.org/eBRAP/public/Program.htm>

Brief Description: The vision of the FY19 PRMRP is to improve the health, care, and well-being of all military Service members, Veterans, and beneficiaries. The PRMRP challenges the scientific and clinical communities to address at least one of the FY19 PRMRP Topic Areas with original ideas that foster new directions along the entire spectrum of research and clinical care. The program seeks applications in laboratory, clinical, behavioral, epidemiologic, and other areas of research to advance knowledge in disease etiology, improve prevention, detection, diagnosis, treatment, and quality of life for those affected by a relevant disease or condition, and to develop and validate clinical care or public health guidelines.

The PRMRP Focused Program Award mechanism is intended to optimize research and accelerate solutions to a critical question related to at least one of the Congressionally directed FY19 PRMRP Topic Areas through a synergistic, multidisciplinary research program.

Awards: The anticipated direct costs budgeted for the entire period of performance for an FY19 PRMRP Focused Program Award will not exceed \$7.2M. Refer to Section II.D.5, Funding Restrictions, for detailed funding information.

Anticipated available funding: \$43,000,000

Proposal Deadline: Pre-Application Submission Deadline: 5:00 p.m. Eastern time (ET), March 14, 2019

• Invitation to Submit an Application: April 2019 • Application Submission Deadline: 11:59 p.m. ET, July 2, 2019

Contact Information: CDMRP Help Desk Phone 301-682-5507 Email: help@eBRAP.org

Grant Program: CDMRP Peer Reviewed Medical Research Program Investigator-Initiated Research Award

Agency: Department of Defense Dept. of the Army – USAMRAA W81XWH-19-PRMRP-IIRA

Website: <https://ebrap.org/eBRAP/public/Program.htm>

Brief Description: The vision of the FY19 PRMRP is to improve the health, care, and well-being of all military Service members, Veterans, and beneficiaries. The PRMRP challenges the scientific and clinical

communities to address at least one of the FY19 PRMRP Topic Areas with original ideas that foster new directions along the entire spectrum of research and clinical care. The program seeks applications in laboratory, clinical, behavioral, epidemiologic, and other areas of research to advance knowledge in disease etiology, improve prevention, detection, diagnosis, treatment, and quality of life for those affected by a relevant disease or condition, and to develop and validate clinical care or public health guidelines.

The PRMRP Investigator-Initiated Research Award (IIRA) is intended to support studies that will make an important contribution toward research and/or patient care for a disease or condition related to at least one of the FY19 PRMRP Topic Areas. The rationale for a research idea may be derived from a laboratory discovery, population-based studies, a clinician's first-hand knowledge of patients, or anecdotal data. Applications must include relevant data that support the rationale for the proposed study. These data may be unpublished or from the published literature.

Impact: The Investigator-Initiated Research Award is designed to support research with the potential to yield highly impactful data that could lead to critical discoveries or major advancements. The application must clearly demonstrate the project's potential immediate and long-range outcome(s)/product(s) (knowledge and/or materiel) and how they will impact a central critical problem or question in the field of research and/or patient care in the FY19 PRMRP Topic Area(s) addressed.

Research projects may focus on any phase of research from basic laboratory research through translational research, including preclinical studies in animal models and human subjects, as well as correlative studies associated with an existing clinical trial. Research involving human subjects and human anatomical substances is permitted; however, this award may not be used to conduct clinical trials. A clinical trial is defined as a prospective accrual of patients (human subjects) in whom an intervention (e.g., device, drug, biologic, surgical procedure, rehabilitative modality, behavioral intervention, or other) is tested for a measurable outcome with respect to safety, effectiveness, and/or efficacy. This outcome represents a direct effect on the subject of that intervention or interaction.

Awards: The anticipated direct costs budgeted for the entire period of performance for an FY19 PRMRP IIRA award will not exceed \$1.2M.

Anticipated available funding: \$79,600,000

Proposal Deadline: Pre-Application Submission Deadline: 5:00 p.m. Eastern time (ET), March 14, 2019

• Invitation to Submit an Application: May 2019 ♣ Application Submission Deadline: 11:59 p.m. ET, July 11, 2019

Contact Information: CDMRP Help Desk Phone 301-682-5507 Email: help@eBRAP.org

Grant Program: Technologies for Mixed-mode Ultra Scaled Integrated Circuits (T-MUSIC)

Agency: Department of Defense DARPA - Microsystems Technology Office HR001119S0016

Website:

<https://www.fbo.gov/index?s=opportunity&mode=form&id=d9dcb5f58978dd3aea11e4d0cb5d1e9e&tab=core&cvview=1>

Brief Description: The DARPA Microsystems Technology Office is soliciting research proposals for the development of advanced RF mixed-mode foundry processes, building blocks, and novel high frequency mixed-mode devices on a CMOS fabrication platform. It is expected that such advances will enable new DoD applications including high capacity, robust communications, radars, and precision sensors.

The first annual ERI Summit, held in July 2018, featured four workshops designed to generate ideas for future ERI programs. Three key issues emerged from the workshop discussions: the need to support domestic manufacturing options and enable them to develop differentiated capabilities for diverse needs; a demand to invest in chip security; and a desire to create new connections between the various ERI programs and to demonstrate the resulting technologies in defense applications. ERI Phase II will build on the existing ERI programs to address all of these challenges, with the goal of supporting a domestic semiconductor manufacturing industry that can implement specialized circuits, demonstrate that those circuits can be trusted through the supply chain and are built with security in mind, and are

ultimately available to both DoD and commercial sector users. To create unique and differentiated domestic manufacturing capabilities, potential areas of exploration in ERI Phase II include the integration of photonics and radiofrequency (RF) components directly into advanced circuits and semiconductor manufacturing processes. DARPA has announced the Photonics in the Package for Extreme Scalability (PIPES) and Technologies for Mixed-mode Ultra Scaled Integrated Circuits (T-MUSIC) within this area. To provide for trustable electronics components, potential Phase II areas of exploration include electronics that can enforce security and privacy protections as well as technologies to enable traceability for electronic components from design through to use. DARPA has announced Guaranteed Architecture for Physical Security (GAPS) within this area.

Awards: Various

Proposal Deadline: Abstract Due Date: January 25, 2019 – 1:00 PM EST o FAQ Submission Deadline: February 18, 2019 – 1:00 PM EST o Proposal Due Date: March 12, 2019 – 1:00 PM EST

Contact Information: BAA Coordinator HR001119S0016@darpa.mil

Grant Program: Guaranteed Architecture for Physical Security (GAPS)

Agency: Department of Defense DARPA - Microsystems Technology Office HR001119S0017

Website:

https://www.fbo.gov/index?s=opportunity&mode=form&id=cfecfe762954149924ec59c95ec6a7b8&tab=core&_cvview=1

Brief Description: The Microsystems Technology Office at DARPA seeks innovative proposals in the areas of developing hardware security and software architectures with physically provable guarantees to isolate high risk transactions and to enable systems with multilevel data security assertions. Like many system owners, the Department of Defense (DoD) processes sensitive data in system enclaves, isolated from other systems. Corporate and government system architects pay particular attention to any interfaces between such enclaves and less trusted systems. In this BAA, we define ‘high risk transactions’ as instances when data moves between systems of different security levels. Today, modern computing systems are incapable of creating sufficient security protections such that they can be trusted with the most sensitive data while simultaneously being exposed to untrusted data streams. Specifically, it is common knowledge that one should not load extremely sensitive data on internet-facing computing systems (even if you install an anti-virus product). Therefore, for the most sensitive computing systems, DoD and commercial industry have in certain places adopted a series of air-gaps – breaks between computing systems to prevent the leakage and compromise of sensitive information. For the purposes of the GAPS program, we consider high risk transactions in terms of privacy and security that are required and pay particular attention when ‘secure’ and ‘insecure’ systems are attached. Over the past 40 years this has led to niche industries of ‘guards’ that are typically externally retrofitted into existing systems in contrast to mature engineering processes that considers security as part of a system.

Grant Program: Long Range BAA

Agency: Department of Defense Office of Naval Research N00014-19-S-B001

Website: <https://www.onr.navy.mil/work-withus/funding-opportunities>

Brief Description: The Office of Naval Research (ONR), ONR Global (ONRG), and the Marine Corps Warfighting Lab (MCWL) are interested in receiving proposals for Long-Range Science and Technology (S&T) Projects which offer potential for advancement and improvement of Navy and Marine Corps operations. Readers should note that this is an announcement to declare ONR's broad role in competitive funding of meritorious research across a spectrum of science and engineering disciplines.

Awards: Various

Proposal Deadline: September 30, 2019

Contact Information: Veronica Lacey Grants Specialist [Grants.gov Questions](#)

Grant Program: FY19 Office of Naval Research (ONR) Navy and Marine Corps Science, Technology, Engineering & Mathematics (STEM), Education and Workforce Program

Agency: Department of Defense Office of Naval Research N00014-19-S-F003

Website: <https://www.onr.navy.mil/Contracts-Grants/Funding-Opportunities/Broad-Agency-Announcements.aspx>

Brief Description: The ONR seeks a broad range of applications for augmenting existing or developing innovative solutions that directly maintain, or cultivate a diverse, world-class STEM workforce in order to maintain the U.S. Navy and Marine Corps' technological superiority. The goal of any proposed effort must provide solutions that will establish and maintain pathways of diverse U.S. citizens who are interested in uniformed or civilian DoN (or Navy and Marine Corps) STEM workforce opportunities. As the capacity of the DoN Science and Technology (S&T) workforce is interconnected with the basic research enterprise and STEM education system, ONR recognizes the need to support efforts that can jointly improve STEM student outcomes and align educational efforts with Naval S&T current and future workforce needs. This announcement explicitly encourages projects that improve the capacity of education systems and communities to create impactful STEM educational experiences for students and workers. Submissions are encouraged to consider including active learning approaches and incorporating 21st century skill development. Projects must aim to increase student and worker engagement in STEM and enhance people with needed Naval STEM capabilities. ONR encourages applications to utilize current STEM educational research for informing project design and advancing our understanding of how and why people choose STEM careers and opportunities of naval relevance.

Awards: ONR's total STEM funding effort is \$6,250,000 per year, subject to the availability of funds. Under this FOA competition, ONR intends to award approximately twenty-five (25) awards for a maximum of \$250,000 per year for each award, with one-year (1) option periods for up to three (3) years.

Proposal Deadline: White Paper Inquiries and Questions 17 June 2019 (Monday) White Papers must be received between 1 April 2019 (Monday) with a deadline of 28 June 2019 (Friday) at 5:00 PM Eastern Time Application Inquiries and Questions 16 September 2019 (Monday) Applications must be received no later than 27 September 2019 (Friday) at 11:59 PM Eastern Time

Grant Program: Microsystems Technology Office (MTO)

Agency: Department of Defense DARPA HR001118S0060

Website:

https://www.fbo.gov/index?s=opportunity&mode=form&id=68dfd959363ffdeb96f61c065e212ef7&tab=core&_cview=1

Brief Description: Since its inception in 1991, MTO has helped create and prevent strategic surprise through investments in compact microelectronic components such as microprocessors, microelectromechanical systems (MEMS), and photonic devices. MTO's revolutionary work applying advanced capabilities in areas such as wide-band gap materials, phased array radars, high-energy lasers, and infrared imaging have helped the United States establish and maintain technological superiority for

more than two decades. MTO seeks to develop high-risk, high-reward technologies that continue DARPA's mission of creating and preventing strategic surprise, help to secure the Department of Defense's (DoD) technological superiority, and address the complex threats facing U.S. national security. Proposed research should investigate innovative approaches that enable revolutionary advances in science, devices, or systems. Specifically excluded is research that primarily results in evolutionary improvements to the existing state of practice. As MTO evolves to address future microsystems-related challenges, the office has identified three target thrust areas: (1) Electronics: Managing Moore's Inflection, (2) Spectrum: Enhancing Our Advantage with Agility and Autonomy, and (3) Sensors: Decentralized Sensors for the DoD.

Awards: Multiple

Proposal Deadline:

Abstract Due Date: Abstracts may be submitted on a rolling basis until 1:00PM on May 26, 2020. o

Grant Program: AFRL/RXC Structural Materials Open BAA

Agency: Department of Defense Air Force -- Research Lab FA8650-18-S-5010

Website: <http://cdmrp.army.mil/funding/dmrdp>

Brief Description: Air Force Research Laboratory, Materials & Manufacturing Directorate, Structural Materials Division, AFRL/RXC, is soliciting white papers and potentially technical and cost proposals under this announcement that support the needs of its Structural Materials and Applications mission. Structural Materials technologies that range from materials and scientific discovery through technology development and transition are of interest. Descriptors of Materials and Manufacturing Directorate technology interests are presented in two contexts in the Statement of Objectives (BAA Attachment 1); that of structural materials science and engineering academic "competencies," and that of Air Force application area needs.

Awards: Up to \$5,000,000; Available program funding: \$99,500,000

Proposal Deadline: White Paper Submission: 20 September 2023

Proposal Submission: Due followed by white paper submission and review

Contact Information: Adrianna Menker Contracting/Grants Officer Phone 937-713-9924

Grant Program: NRL Long Range Broad Agency Announcement (BAA) for Basic and Applied Research

Agency: Department of Defense Naval Research Laboratory N00173-18-S-BA01

Website: <https://www.nrl.navy.mil/doing-business/Current-NRL-BAA>

Brief Description: The Naval Research Laboratory (NRL) The Naval Research Laboratory (NRL) is the Navy's corporate laboratory. NRL conducts basic and applied research for the Navy in a variety of scientific and technical disciplines. The basic research program is driven by perceptions about future requirements of the Navy. NRL conducts most of its research program at its own facilities but also funds some related research such as anticipated by this announcement. More extensive research support opportunities are available from the Naval Research Laboratory (NRL). NRL announcements may be accessed via the Internet at <https://www.nrl.navy.mil/doingbusiness/contracting-division/baa>. NRL is interested in receiving proposals for Long-Range Science and Technology (S&T) Projects which offer potential for advancement and improvement of Navy and Marine Corps operations. Readers should note that this is an announcement to declare NRL's broad role in competitive funding of meritorious research across a spectrum of science and engineering disciplines. A brief description of the NRL Program Codes and the science and technology thrusts that NRL is pursuing is provided below. Additional information can be found at the NRL website at <https://www.nrl.navy.mil/research/directorates-divisions/>. This

announcement is an expression of interest only and does not commit the Government to make any award or to pay for any proposal preparation costs.

Awards: Various

Proposal Deadline: May 9, 2019

Department of Education

Grant Program: Fulbright-Hays Group Projects Abroad (GPA) Short-Term Project

Agency: Department of Education CFDA Number 84.021A

Website: <https://www.govinfo.gov/content/pkg/FR-2019-01-24/pdf/2019-00107.pdf>

Brief Description: The purpose of the Fulbright-Hays GPA Program is to promote, improve, and develop modern foreign languages and area studies at varying levels of education. The program provides opportunities for faculty, teachers, and undergraduate and graduate students to conduct individual and group projects overseas to carry out research and study in the fields of modern foreign languages and area studies. This notice relates to the approved information collection under OMB control number 1840-0792.

This competition invites applicants to submit an application to request support for either a Fulbright-Hays GPA short-term project (GPA short-term projects 84.021A) or a Fulbright-Hays GPA long-term project (GPA long-term projects 84.021B). Applicants must clearly indicate on the SF 424, Application for Federal Assistance cover sheet whether they are applying for a GPA short-term project (84.021A) or a GPA long-term project (84.021B). Additional submission details are included in the application package.

There are three types of GPA short-term projects: (1) Short-term seminar projects of four to six weeks in length designed to help integrate international studies into an institution's or school system's general curriculum by focusing on a particular aspect of area study, such as the culture of an area or country of study (34 CFR 664.11); (2) curriculum development projects of four to eight weeks in length that provide participants an opportunity to acquire resource materials for curriculum development in modern foreign language and area studies for use and dissemination in the United States (34 CFR 664.12); and (3) group research or study projects of three to twelve months in duration designed to give participants the opportunity to undertake research or study in a foreign country (34 CFR 664.13).

Awards: Up to \$100,000. Estimated total funding: \$1,000,000

Proposal Deadline: March 25, 2019; Applications available: January 24, 2019. Deadline for transmittal of applications: March 25, 2019.

EPA

Grant Program: 16th Annual P3 Awards: A National Student Design Competition Focusing on People, Prosperity and the Planet - Safe and Sustainable Water Resources

EPA-G2019-P3-Q1 – Air Quality

EPA-G2019-P3-Q2 – Safe and Sustainable Water Resources

EPA-G2019-P3-Q3 – Sustainable and Healthy Communities

EPA-G2019-P3-Q4 – Chemical Safety

Agency: Environmental Protection Agency

Website: <https://www.epa.gov/research-grants/16th-annual-p3-awards-national-student-design-competition-focusing-people-prosperity>

Brief Description: The U.S. Environmental Protection Agency (EPA) – as part of its People, Prosperity and the Planet (P3) Award Program – is seeking applications proposing to research, develop, design, and demonstrate solutions to real world challenges. The P3 competition highlights the use of scientific principles in creating innovative technology-based projects that achieve the mutual goals of improved quality of life, economic prosperity, and protection of the planet – people, prosperity, and the planet. The EPA offers the P3 competition to respond to the needs of people in the United States (U.S.)—e.g., those in small, rural, tribal, and disadvantaged communities. Please see the People, Prosperity and the Planet (P3) Student Design Competition website for more details about this program. Proposed projects must embody the P3 approach, which is that they have the intention and capability to simultaneously improve the quality of people’s lives, provide economic benefits, and protect the environment.

This solicitation provides the opportunity for the submission of applications for projects that may involve human subjects research. Human subjects research supported by the EPA is governed by EPA Regulation 40 CFR Part 26 (Protection of Human Subjects). This includes the Common Rule at subpart A and prohibitions and additional protections for pregnant women and fetuses, nursing women, and children at subparts B, C, and D. Research meeting the regulatory definition of intentional exposure research found in subpart B is prohibited by that subpart in pregnant women, nursing women, and children. Research meeting the regulatory definition of observational research found in subparts C and D is subject to the additional protections found in those subparts for pregnant women and fetuses (subpart C) and children (subpart D). All applications must include a Human Subjects Research Statement (HSRS, as described in Section IV.C.5.b of this solicitation), and if the project involves human subjects research, it will be subject to an additional level of review prior to funding decisions being made as described in Sections V.C and V.D of this solicitation.

Awards; The first phase is a competition for one-year grants of up to \$25,000 to test, research, and develop innovative scientific projects or engineering designs that use the P3 approach. In the spring of 2020, the Phase I grantees awarded from this solicitation are required to present their projects/designs at the National Student Design Expo. EPA will provide teams with information about the Expo during the award year. At the end of Phase I, teams will submit a *Project Report* that will serve as an application for a Phase II grant award of up to \$100,000. The Phase II grant awards are intended to support the further development and demonstration of the projects/designs created in Phase I. The competitors for 2020 P3 Phase II grants are limited to recipients of Phase I grant awards from this solicitation.

Submission Deadline: December 11, 2018, 11:59:59 pm Eastern Time

Contact Information: Technical Contact: Angela Page (page.angelad@epa.gov), Phone: 202-564-7957; Eligibility Contact: Ron Josephson (josephson.ron@epa.gov), Phone: 202-564-7823; Electronic Submissions: Debra M. Jones (jones.debram@epa.gov), Phone: 202-564-7839

Department of Energy

Grant Program: DE-FOA-0002021: Notice of Intent to Issue Funding Opportunity Announcement No. DE-FOA-0002022

Agency: Department of Energy DE-FOA-0002021

Website: <https://eere-exchange.energy.gov/>

Brief Description: The Office of Energy Efficiency and Renewable Energy (EERE) intends to issue, on behalf of the Fuel Cell Technologies Office (FCTO), Funding Opportunity Announcement (FOA) DE-FOA-0002022 entitled “Fiscal Year 2019 H2@Scale Funding Opportunity Announcement.” Hydrogen is one part of DOE’s all-of-the-above energy portfolio, and can offer options for affordable and secure energy for transportation, as well as for stationary and industrial applications. The United States produces over 10 million metric tons of hydrogen per year, used primarily for petroleum refining and fertilizer

production, but there are a number of opportunities to increase hydrogen generation and utilization across the country. “H2@Scale” is an initiative to enable affordable and reliable largescale hydrogen generation, transport, storage, and utilization in the United States across sectors. For example, electrolyzers can produce hydrogen by splitting water when power generation exceeds demand. This can reduce or prevent curtailment of renewables, optimize baseload (e.g., nuclear power) assets, and enable grid stability and resiliency, while also producing hydrogen as a fuel or feedstock for end users. In addition, hydrogen produced from existing baseload assets can be stored, distributed, and used as a fuel for transportation, stationary power, process or building heat, and industrial sectors (e.g. steel manufacturing), creating an additional revenue stream for those assets. FCTO focuses on research, development, and innovation to advance hydrogen and fuel cells for transportation and diverse applications enabling energy security, resiliency, and a strong domestic economy in emerging technologies. This notice of intent (NOI) is issued so that interested parties are aware of the EERE’s intention to issue this FOA in the near term. All of the information contained in this NOI is subject to change. EERE will not respond to questions concerning this NOI. Once the FOA has been released, EERE will provide an avenue for potential applicants to submit questions. EERE plans to issue the FOA in January/February of 2019 via the EERE Exchange website <https://eere-exchange.energy.gov/>. If applicants wish to receive official notifications and information from EERE regarding this FOA, they should register in EERE Exchange. When the FOA is released, applications will be accepted only through EERE Exchange.

Awards: TBD

Submission Deadline: TBD

Grant Program: FY 2019 Bioenergy Technologies Office (BETO) Multi-topic Request for Information (RFI)

Agency: Department of Energy DE-FOA-0002020

Website: <https://eere-exchange.energy.gov/>

Brief Description: The U.S. Department of Energy (DOE) Office of Energy Efficiency and Renewable Energy (EERE) Bioenergy Technologies Office (BETO) is requesting information on research opportunities related to outdoor algae research, biomass characteristics and feedstock performance, and renewable energy from urban and suburban wastes to help inform its research priorities and funding strategies. BETO seeks information to help inform its research priorities, as part of its annual planning process. The purpose of this RFI is to solicit feedback from industry, academia, research laboratories, government agencies, and other stakeholders to help ensure research areas are relevant, timely, appropriate for federal government funding, and aligned with Administration priorities. This is solely a request for information and not a Funding Opportunity Announcement (FOA). No funding applications are being accepted in response to this RFI. Specifically, BETO is seeking information related to the following three topic areas: 1) Outdoor Algae Research; 2) Biomass Characteristics and Feedstock Performance; and 3) Renewable Energy from Urban and Suburban Wastes. Please see the full Request for Information (RFI) DE-FOA-0002020 at <https://eere-exchange.energy.gov/>.

Awards: TBD

Submission Deadline: TBD

For EERE Exchange questions:

Grant Program: Energy-Water Desalination Hub

Agency: Department of Energy

Website: <https://eere-exchange.energy.gov/#FoaId4f2ad83a-6f54-4458-97d8-94e748cb2f14>

Brief Description: The Office of Energy Efficiency and Renewable Energy (EERE), within the U.S. Department of Energy (DOE), invests in cutting-edge research, development, and demonstration activities focused on sustainable transportation, renewable power, and energy efficiency. Through EERE's Advanced Manufacturing Office (AMO) public-private R&D consortia, manufacturers, small businesses, universities, national laboratories, and state and local governments are brought together to pursue coordinated early-stage R&D in high-priority areas essential to energy in manufacturing. Federal funding is the catalyst to bring stakeholders into shared spaces and to address process and technological challenges that present a significant degree of scientific or technical uncertainty.

The purpose of this funding opportunity announcement (FOA) is to establish an Energy Innovation Hub (referred to hereafter as the Energy-Water Desalination Hub, or the Hub) to address water security issues in the U.S. For the purpose of this FOA, "desalination" more broadly includes technologies that primarily remove salts. The Hub is a critical component of the Department of Energy's (DOE) broader Water Security Grand Challenge which will use a coordinated suite of prizes, competitions, early stage research and development (R&D), and other programs to help address the nation's water security needs. The Energy-Water Desalination Hub will be organized around four topic areas: 1) Materials Research and Development, 2) New Process Research and Development, 3) Modeling and Simulation Tools, and 4) Integrated Data and Analysis. DOE intends to select and fund one application with the greatest likelihood of achieving the goals of all four topics of this FOA.

Informational Webinar: The Informational Webinar mentioned in the FOA will be held on January 7, 2019 at 3:00 PM Eastern Standard Time. Attendance is not mandatory and will not positively or negatively impact the overall review of any Applicant submissions. Standard application questions regarding the EERE Office and FOA procedures will be discussed.

Awards: Up to \$45,000,000; Anticipated Program Funding: \$100,000,000

Submission Deadline: May 07, 2019 A mandatory Concept Paper is due February 7, 2019.

Contact: FOA Mailbox: AMOWaterHub@ee.doe.gov

Grant Program: Science Undergraduate Laboratory Internship (SULI)

Agency: Department of Energy

Website: <https://science.energy.gov/wdts/suli/>

Brief Description: The Science Undergraduate Laboratory Internship (SULI) program encourages undergraduate students and recent graduates to pursue science, technology, engineering, and mathematics (STEM) careers by providing research experiences at the Department of Energy (DOE) laboratories. Selected students participate as interns appointed at one of [17 participating DOE laboratories/facilities](#). They perform research, under the guidance of laboratory staff scientists or engineers, on projects supporting the DOE mission. The SULI program is sponsored and managed by the DOE Office of Science's, Office of Workforce Development for Teachers and Scientists (WDTS) in collaboration with the DOE laboratories/facilities.

Applications for the SULI program are solicited annually for three separate internship terms. Internship appointments are 10 weeks in duration for the Summer Term (May through August) or 16 weeks in duration for the Fall (August through December) and Spring (January through May) Terms. Each DOE laboratory/facility offers different research opportunities; not all DOE laboratories/facilities offer internships during the Fall and Spring Terms.

Awards: Various

Submission Deadline: January 10, 2019 at 5:00 PM ET.

Grant Program: Transformational Sensing Capabilities for Monitoring the Subsurface

Agency: Department of Energy DE-FOA-0001998

Website: <https://www.fedconnect.net/FedConnect/default.htm>

Brief Description: The purpose of this Request for Information (RFI) is to seek information from stakeholders such as industry, academia, nonprofits, and research institutions about Research and Development (R&D) activities that could lead to development of transformational sensing capabilities for monitoring parameters associated with CO₂ injection throughout the storage complex, including: overburden, reservoir, and underburden. This includes fluid flow throughout the reservoirs into the far field through critical but difficult-to-detect features such as faults and integrated fracture networks. Of particular interest are transformational sensors or sensing systems that will improve the ability to monitor movement of fluids in the subsurface and the ability to measure critical subsurface properties throughout a commercial-scale (greater than 50 million metric tons CO₂ stored) storage complex. A storage complex consists of: (1) one or more storage reservoirs, with permeability and porosity that allow injection and storage of CO₂; and (2) one or more low-permeability seals, which enclose the reservoir(s) and serve as barriers to migration of CO₂ out of the reservoir.

Awards: Various

Submission Deadline: Responses to this RFI must be submitted electronically to: DE-FOA0001998@netl.doe.gov with the subject line "DE-FOA0001998 - RFI" no later than 8:00 PM (ET) on December 3, 2018.

Contact Information: John R. Hatfield John.Hatfield@netl.doe.gov

Grant Program: Advanced Systems Integration for Solar Technologies

Agency: Department of Energy DE-FOA-0001987

Website: <https://eere-exchange.energy.gov/#FoaId3c598467-b778-45b1-b2a0-7fc4a14e1456>

Brief Description: The Office of Energy Efficiency and Renewable Energy (EERE) intends to issue, on behalf of the Solar Energy Technology Office, a Funding Opportunity Announcement (FOA) entitled "Advanced Systems Integration for Solar Technologies".

This FOA supports the mission of the Solar Energy Technologies Office (SETO) which is to support early-stage research and development to improve the performance and flexibility of solar technologies that contribute to a reliable and resilient U.S. electric grid. The office invests in innovative research efforts that securely integrate more solar energy into the grid, enhance the use, storage and dispatch of solar energy, and lower solar electricity costs.

DOE is committed to improving the affordability of energy technologies and strengthening the Energy Sector's capability to withstand cyber and physical threats, including natural disasters. Improving the strategic location and situational awareness of solar systems can help ensure continuity of service in the face of widespread and coordinated threats. Developing innovative approaches to accelerate the transfer of solar system solutions that will improve Energy Sector resilience is also a priority.

Awards: Various

Submission Deadline: Letter of Intent Deadline: 11/14/2018 5:00 PM ET

NASA

Grant Program: ROSES 2018: Remote Sensing Theory for Earth Science

Agency: NASA NNH18ZDA001N-RST

Website: <https://nspires.nasaprs.com/external/solicitations/summary.do?solId=%7B5BF2E896-B51E-AE03-FF42-17EB9208238B%7D&path=open&method=init>

Brief Description: Remote sensing science to establish a theoretical basis for measuring Earth surface properties using reflected, emitted, and scattered electromagnetic radiation and to develop the

methodologies and technical approaches to analyze and interpret such measurements lies at the heart of NASA's mission. Remote sensing science investigations are needed to prepare for new remote sensing measurements of the Earth from space and to ascertain the readiness of candidate technologies for obtaining them. The objective of the Remote Sensing Theory (RST) program element, a multidisciplinary/interdisciplinary program, is to enable major steps in algorithm and future technology development that will ultimately lead to significant advances in remote sensing Earth observing. The program will support fundamental scientific, nonincremental advances in remote sensing theory and radiative transfer, including advancement of retrieval algorithms to be used for space-based remote sensing of the Earth's atmosphere, oceans, biosphere, cryosphere, land surface, and/or Earth interior.

Awards: It is expected that there will be approximately \$4.8 M available in Fiscal Year (FY) 2019

Notice of Intent: Not Required

Proposal Deadline: RST18 NOIs Due Feb 28, 2019

RST18 Proposals Due Mar 22, 2019

Grant Program: ROSES 2018: Heliophysics Living With a Star

Agency: NASA NNH18ZDA001N-LWS

Website: <https://nspires.nasaprs.com/external/solicitations/summary!init.do?solId={8DB28CFB-8DD8-8A61-F6FF-7418AACBBE0B}&path=open>

Brief Description: The Living With a Star (LWS) Program emphasizes the science necessary to understand those aspects of the Sun and Earth's space environment that affect life and society. A primary goal of the LWS program is to provide scientific understanding, with the potential for prediction, of the Heliosphere as a system. This includes an understanding of the space weather conditions from the Sun to the Earth and throughout the interplanetary medium, as well as the Sun-climate connection. The LWS program objectives are as follows: 1. Understand how the Sun varies and what drives solar variability. 2. Understand how the Earth and planetary systems respond to dynamic external and internal drivers. 3. Understand how and in what ways dynamic space environments affect human and robotic exploration activities.

Awards: It is expected that there will be approximately \$4.8 M available in Fiscal Year (FY) 2019

Notice of Intent: Not Required

Proposal Deadline: Step-1 Proposal Due February 14, 2019

Contact: Jeff Morrill Heliophysics Division, jeff.s.morrill@nasa.gov

Grant Program: ROSES 2018: Advanced Information Systems Technology

Agency: NASA NNH18ZDA001N-AIST

Website: <https://nspires.nasaprs.com/external/solicitations/summary.do?solId=%7BC0D379E0-B4A8-6B97-7B0C-7F5409CD2442%7D&path=open&method=init>

Brief Description: NASA's Advanced Information Systems Technology (AIST) Program identifies, develops, and supports adoption of information technology expected to be needed by the Earth Science Division in the 5-20-year timeframe, as described in ROSES-18 Appendix A.1. Currently, the AIST Program is organized around two primary thrusts, the Analytic Center Framework (ACF) and the New Observing Strategy (NOS). The ACF harmonizes tools, data, and computing environments to meet the needs of Earth science investigations of physical processes and natural phenomena. The aim of these investigations is to improve human understanding and prediction of Earth processes and natural phenomena. The ACF integrates new or previously unlinked datasets, tools, models, and a variety of computing resources together into a common platform to address previously intractable scientific questions. Additionally, this activity seeks to generalize custom or unique tools that are used by a limited

community, in order to make them accessible and useful to a broader community. The ACF concept is intended to be instantiated for a specific investigation quickly and to be configured to help answer the specific science questions being investigated. Some ACF instantiations might become permanent, based on the needs of the user community. An ACF instantiation may support a scientific investigation using data from both NASA and nonNASA sources. The ACF is described in more detail at the AIST website (https://esto.nasa.gov/info_technologies_aist.html).

Awards: It is expected that there will be approximately \$11.4 M available in Fiscal Year (FY) 2019

Notice of Intent: Not Required

Proposal Deadline: AIST18 NOIs Due Jan 10, 2019

Grant Program: Appendix B: Solicitation of Proposals for Flight and Ground Space Biology Research

Agency: NASA NNH18ZTT001N-FG

Website: <https://nspires.nasaprs.com/external/solicitations/summary.do?solId=%7BB5D22D51-66F6-AE61-66F2-4D1059F5B7CB%7D&path=&method=init>

Brief Description: This Appendix to the Research Opportunities in Space Biology (ROSBio) - 2018 NASA Omnibus Research Announcement solicits proposals that will increase NASA's understanding of how living systems acclimate to spaceflight to support human space exploration. The solicited research will fall into the following four research emphases: 1. Microbiology studies that will produce new understanding to augment and expand our knowledge of the Microbiology of the Built Environment (MoBE) in Space and suggest how to manipulate and control it in the closed environment of exploration spacecraft. 2. Plant Biology studies in support of Human Space Exploration making maximal use of the capabilities of the VEGGIE and Advanced Plant Habitat) on ISS to study environmental effects on plant growth and interactions with microbes and fungi. Proposed studies should answer fundamental questions about how plants adapt to spaceflight and provide new understanding of how to grow plants in space that will enable human space exploration. 3. Animal Biology (vertebrate and invertebrate) in support of Human Space Exploration. 4. Studies designed to compare results and validity of microgravity "simulators" in parallel with flight and ground-based studies. The types of experiments solicited by this Appendix include the following, based on the award type (please see the solicitation for descriptions of specific award types): Flight experiments using the ISS, or suborbital and parabolic flight platforms to test, develop, or refine flight hypotheses; Ground-based experiments conducted in non-NASA or NASA laboratories, including drop tower facilities, and/or specialized centrifuge facilities to study gravity as a continuum; Individual PI- led or team-based studies.

Awards: Up to \$1,200,000

Notice of Intent: Not Required

Proposal Deadline: Step-1 Proposals Due Jan 07, 2019

Contact: Dr. David L. Tomko, Program Scientist for Space Biology Space Life and Physical Sciences Research and Applications Division, NASA Headquarters Phone: 202-358-2211 Email: dtomko@nasa.gov

Grant Program: ROSES 2018 B.13 Heliophysics DRIVE Science Centers

Agency: NASA NNH18ZDA001N-DRIVE

Website: <https://nspires.nasaprs.com/external/solicitations/summary!init.do?solId={2AF0A877-0C3F-8E34-5954-223EAAD4CBB4}&path=open>

Brief Description: DRIVE Science Centers (DSCs) are part of an integrated multi-agency initiative, DRIVE (Diversify, Realize, Integrate, Venture, Educate), put forward as a high priority recommendation of the 2013 Solar and Space Physics Decadal Survey. DSCs, which fall under the "Venture" aspect of the

DRIVE initiative, address grand challenge goals that are both ambitious and focused enough to be achievable within the lifetime of the center - in other words, problems poised and ready for major advances. This program is intended to support science that cannot be effectively done by individual investigators or small teams, but requires the synergistic, coordinated efforts of a research center. In order to maximize the potential for these science centers to deliver on innovative and breakthrough science, they are expected to include aspects in their design that support collaboration and deep knowledge integration across the full range of expertise (scientific, computational, educational) within them, as recommended in a recent report by the National Academy of Sciences, Enhancing the Effectiveness of Team Science. With this motivation, NASA and NSF joined forces to design a DSC program implemented in this ROSES-18 program element by NASA, that takes advantage of lessons learned from ongoing and past science centers and the growing body of information on team science.

Awards: It is expected that there will be approximately \$4.0 M available in Fiscal Year (FY) 2019 to support ~6 Phase I DSCs selected through this solicitation. Annual funding is unlikely to exceed \$650K per investigation. This is subject to receipt of meritorious proposals and the availability of funds. The actual number of awards will depend on the quality of the proposals received; NASA reserves the right to make no awards, or more than 6 awards.

Agency: NASA NNH18ZDA001N-2HSWO2R

Website: <https://nspires.nasaprs.com/external/solicitations/summary.do?solId=%7B42510C5A-BC75-3943-5FD4-C4C2C63B540E%7D&path=open&method=init>

Brief Description: NSF's primary role in developing space weather readiness for the nation is in the support of basic research that advances fundamental understanding of space weather and related processes, specifically, the generation of solar storms, their propagation through the interplanetary medium, and the generation of disturbances in the near-Earth space environment and atmosphere. NSF-supported community members use that fundamental understanding in the development of models for these space weather processes, which draw on observations from NSF's persistent ground-based observational platforms, among others, to test and further refine our community's understanding. The goals of these NSF funded research activities are to benefit society and contribute to the achievement of specific, desired societal outcomes, such as improving space weather predictive capability.

For this opportunity, NASA, NOAA, and NSF have identified the following focus area for research and development to advance forecast models of energetic particles in the heliosphere: • Improve forecasts of the energetic proton and/or heavy ion conditions in the heliosphere due to solar eruptions. The primary goal of this funding is to support research by the grant recipient to improve numerical models and/or data utilization techniques that could advance forecasting capabilities and which could also lead to improved scientific understanding. Effective utilization of available data is encouraged. Employing data assimilation, ensemble, and/or machine-learning techniques is also encouraged. Improved forecast capabilities could include, for example, forecasts of solar event probabilities and enhanced energetic particle levels one or more days prior to a solar eruption, as well as probabilities of event duration, peak flux levels, and integrated event fluence following the initiation of a solar eruption. Improved forecasts of solar energetic particles can support numerous applications, including human and robotic exploration beyond low-Earth orbit, satellite launch and on-orbit operations, aviation operations, and radio communication.

Awards: Various

Proposal Deadline: Step-1 Proposal due on February 1, 2019

Contact: James Spann Heliophysics Division Science Mission Directorate NASA Headquarters
Washington, DC 20546-0001 Telephone: (202) 358-0574 Email: jim.spann@nasa.gov

National Endowment of Humanities

Grant Program: Institutes for Advanced Topics in the Digital Humanities

Agency: National Endowment for the Humanities

Website: <https://www.neh.gov/grants/odh/institutes-advanced-topics-in-the-digital-humanities>

Brief Description: The Institutes for Advanced Topics in the Digital Humanities (IATDH) program supports national or regional (multistate) training programs for scholars, humanities professionals, and advanced graduate students to broaden and extend their knowledge of digital humanities. Through this program NEH seeks to increase the number of humanities scholars and practitioners using digital technology in their research and to broadly disseminate knowledge about advanced technology tools and methodologies relevant to the humanities. Applicants may apply to create institutes that are a single opportunity or are offered multiple times to different audiences. Institutes may be as short as a few days and held at multiple locations or as long as six weeks at a single site; virtual institutes are also permissible. Training opportunities could be offered before or after regularly occurring scholarly meetings, during the summer months, or during appropriate times of the academic year. The duration of a program should allow for full and thorough treatment of the topic; it should also be appropriate for the intended audience. These professional development programs may focus on a particular computational method, such as network or spatial analysis. They may also target the needs of a particular humanities discipline or audience.

Awards: Maximum award amount \$250,000

Deadline: Optional Draft due: February 26, 2019

Application due: March 26, 2019

Contact: Contact the Office of Digital Humanities Team odh@neh.gov

Environment Research and Education Foundation

Grant Program: Research on Research on Sustainable Solid Waste Management and Recycling

Agency: Environment Research and Education Foundation

Website: <https://erefdn.org/research-grants-projects/how-to-apply-for-grant/>

Brief Description: The sustainability movement has reached the business models of nearly every industry in the United States, and many companies, municipalities and states have set aggressive sustainability goals that include how waste streams are being managed. The EREF Board of Directors has set an initiative to ensure research funded reflects EREF's long-term strategic plan to address all areas of integrated solid waste management, with a strong focus towards research that increased sustainable solid waste management practices.

Pre-proposal topics must relate to sustainable solid waste management practices and pertain to the following topic areas:

1. Waste minimization
2. Recycling
3. Waste conversion to energy, biofuels, chemicals or other useful products. This includes, but is not limited to, the following technologies:
 - Waste-to-energy
 - Anaerobic digestion
 - Composting
 - Other thermal or biological conversion technologies

4. Strategies to promote diversion to higher and better uses (e.g. organics diversion, market analysis, optimized material management, logistics, etc.)
5. Landfilling

Upon submission, pre-proposals will be examined by a selection committee and successful pre-proposals will be invited to submit a full proposal for consideration. Full proposals will then be subjected to EREF's review process, as described later in this document.

Proposal Deadline: EREF has two deadlines per year for pre-proposals:

December 1

May 1

Contact: If interested, please send an email to Eric Blitz (eric.blitz@njit.edu) and Atam Dhawan (dhawan@njit.edu).

Streamlyne Question of the Week

Question: How can I update my eRA Commons ID for all future NIH proposals?

Answer: Go to Main Menu>Setting>Person Extended Attributes, click "Edit", enter it under "eRA Commons User Name" and submit the change/update.

More FAQs on Streamlyne: Please visit <http://www.njit.edu/research/streamlyne/>

Streamlyne Information

Streamlyne User Manuals: <http://www.njit.edu/research/streamlyne/>

Streamlyne_NewUserManual_CommonElements.docx : This manual provides a reference to all the common elements of Streamlyne Research. This user manual is a good document to review each module's functionality.

Streamlyne_NewUserManual_PD&PDBudget.docx: This is a user manual on proposal and budget development in Streamlyne. The content herein explain the use and functionality of this module. This is the most useful Streamlyne document for PIs and users new to Streamlyne.

New "How to Do" videos have been posted on the research website <http://www5.njit.edu/research/streamlyne/>.

Faculty and staff having any questions on proposal submission, may contact their college representatives, and also follow up with **Justin Samolewicz, Associate Director (Pre Award)** 973-596-3145; justin.m.samolewicz@njit.edu; and **Eric Hetherington**, Director, Sponsored Research Programs Administration 973-596-3631; eric.d.hetherington@njit.edu. The college representatives to help PIs on proposal submissions are

John McCarthy, NCE Director of Research; (973) 596-3247; john.p.mccarthy@njit.edu

Cristo Leon, CSLA Director of Research; (973) 596-6426; cristo.e.yanezleon@njit.edu

Sean Andrews, YWCC Director of Research; (973) 596-5352; sean.t.andrews@njit.edu

Iris Pantoja, NCE, CoAD and MTSM Project Manager; 973-596-4483; irp3@njit.edu

Finding Research Opportunities and Collaborations (FROC) **Walk-In Open-Hour Discussion with SVPR Over Tea**

Every Thursday: 3.00 PM-4.00 PM; 340 Fenster Hall

The Office of Research has started a new service to help all faculty and staff explore collaborative research opportunities and currently active RFPs (Request for Proposals) for potential proposal development and submission. Faculty and research staff members are welcome to meet with Senior Vice Provost for Research Atam Dhawan at the open-hour every Thursday from 3.00 PM to 4.00 PM to discuss research opportunities related issues including the following but not limited to:

- Research opportunities and potential collaborations
- Currently active RFPs and developing collaborative teams for proposal submission
- Proposal review criterion for specific RFP/program/agency
- Proposal concept and draft review in the context of review criterion
- Future plans for proposal development and submission
- Invention disclosures, patent applications and processing of intellectual property
- External faculty research awards including fellowships

Though *walk-ins* are welcome during the open-hour, faculty members are encouraged to email SVPR Atam Dhawan (dhawan@njit.edu) about specific questions on research opportunities and needs to be discussed in advance for more detailed discussion.

The open-hour session with individuals or small groups of faculty and research staff members is expected to focus on finding research opportunities, developing collaborative teams, exploring the review criterion and reviewing program requirements. Specific proposal submission and grant management issues can be discussed with Office of Research staff separately.

Enjoy coffee/tea and cookies with SVPR over the discussion.

For any questions and additional information, please send an email to SVPR at dhawan@njit.edu.
