NJIT TAB Presents at Wast[ED] Symposium

NJIT TAB conducted a presentation at the Wast[ED] Symposium on November 8, 2022. Wast[ED] was an event sponsored by: the American Institute of Architects NY; the architectural firm of Skidmore, Owings, and Merrill; Pratt Institute, and NJIT's Hillier College of Architecture and Design.

The purpose of the event was to examine issues of how we deal with the current state of our environment by living nearby or on top of waste. The symposium brought together a panel of esteemed architects and thinkers, as well as college students who offered provocative and

counterintuitive perspectives on climate change and its impacts.

NJIT TAB's presentation "Transforming Brownfields into Community Assets" served to define a brownfield, discuss how the redevelopment of brownfield site can contribute to creating economically, environmentally, and socially equitable, sustainable, and resilient communities. Approximately 100 college students and design professionals attended the event.
